PART 1: Point-in-Time Estimates of Homelessness

The 2017 Annual Homeless Assessment Report (AHAR) to Congress

DECEMBER 2017
Key Findings

On a single night in 2017, 553,742 people were experiencing homelessness in the United States. For every 10,000 people in the country, 17 were experiencing homelessness. Approximately two-thirds (65%) were staying in emergency shelters or transitional housing programs, and about one-third (35%) were in unsheltered locations.

Homelessness increased for the first time in seven years. The number of people experiencing homelessness increased by a little less than one percent between 2016 and 2017. This increase reflected a nine percent increase in the number of people experiencing homelessness in unsheltered locations, which was partially offset by a three percent decline in the number of people experiencing homelessness in sheltered locations.

Recent increases in homelessness were driven mostly by specific changes happening within cities. Increases in the numbers of unsheltered individuals in the 50 largest cities accounted for nearly all of the national increase.

The number of people experiencing homelessness in families with children declined by five percent between 2016 and 2017—10,955 fewer people and 3,294 fewer family households. As of 2017, 184,861 people in families with children were experiencing homelessness, 33 percent of the homeless population.

In 2017, 40,799 people were experiencing homelessness as unaccompanied youth—that is, people under the age of 25 experiencing homelessness on their own. Most unaccompanied youth (88%) were between the ages of 18 and 24. Unaccompanied youth were more likely to be unsheltered (55%) than both all people experiencing homelessness (35%) and all people experiencing homelessness as individuals (48%).

Between 2016 and 2017, the number of veterans experiencing homelessness increased for the first time since 2010. Nonetheless, homelessness among veterans dropped 45 percent since 2009. The two percent increase during the past year was almost entirely accounted for by increases among unsheltered veterans in major cities.

Definition of Terms

Please note: Key terms are used for AHAR reporting purposes and accurately reflect the data used in this report. Definitions of these terms may differ in some ways from the definitions found in the Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act and in HUD regulations.

Chlyrically Homeless Individual refers to an individual with a disability who has been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless in those occasions is at least 12 months.

Chlyrically Homeless People in Families refers to people in families in which the head of household has a disability and has either been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless in those occasions is at least 12 months.

Continuums of Care (CoC) are local planning bodies responsible for coordinating the full range of homelessness services in a geographic area, which may cover a city, county, metropolitan area, or an entire state.

Emergency Shelter is a facility with the primary purpose of providing temporary shelter for homeless people.

Homeless describes a person who lacks a fixed, regular, and adequate nighttime residence.

Housing Inventory Count (HIC) is produced by each CoC and provides an annual inventory of beds that assist people in the CoC who are experiencing homelessness or leaving homelessness.

Individual refers to a person who is not part of a family with children during an episode of homelessness. Individuals may be homeless as single adults, unaccompanied youth, or in multiple-adult or multiple-child households.

Other Permanent Housing is housing with or without services that is specifically for formerly homeless people but that does not require people to have a disability.

Parenting Youth are people under age 25 who are the parents or legal guardians of one or more children (under age 18) who are present with or sleeping in the same place as that youth parent, where there is no person over age 24 in the household.

Parenting Youth Household is a household with at least one parenting youth and the child or children for whom the parenting youth is the parent or legal guardian.

People in Families with children are people who are homeless as part of a household that has at least one adult (age 18 and older) and one child (under age 18).

Permanent Supportive Housing (PSH) is a housing model designed to provide housing assistance (project- and tenant-based) and supportive services on a long-term basis to formerly homeless people. HUD’s Continuum of Care program, authorized by the McKinney-Vento Act, funds PSH and requires that the client have a disability for eligibility.

Point-in-Time Counts are unduplicated 1-night estimates of both sheltered and unsheltered homeless populations. The 1-night counts are conducted by CoCs nationwide and occur during the last week in January of each year.

Rapid Rehousing is a housing model designed to provide temporary housing assistance to people experiencing homelessness, moving them quickly out of homelessness and into permanent housing.

Safe Havens provide temporary shelter and services to hard-to-serve individuals.

Sheltered Homelessness refers to people who are staying in emergency shelters, transitional housing programs, or safe havens.

Transitional Housing Programs provide people experiencing homelessness a place to stay combined with supportive services for up to 24 months.

Unaccompanied Homeless Youth (under 18) are people in households with only children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness, and who are under the age of 18.

Unaccompanied Homeless Youth (18-24) are people in households without children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness, and who are between the ages of 18 and 24.

Unsheltered Homelessness refers to people whose primary nighttime location is a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for people (for example, the streets, vehicles, or parks).

Veteran refers to any person who served on active duty in the armed forces of the United States. This includes Reserves and National Guard members who were called up to active duty.
Progress on Preventing and Ending Homelessness

The U.S. Department of Housing and Urban Development and other federal agencies collaborate with state and local partners to prevent and end homelessness across the country. This coordinated effort to end homelessness continues to be a key to making progress to preventing and ending homelessness.

**GOAL**

Prevent and end chronic homelessness

- The number of individuals experiencing chronic homelessness declined by 18 percent, or over 19,000 people, between 2010 and 2017.
- Just under 87,000 individuals experiencing homelessness on a particular night in January 2017 had chronic patterns of homelessness. Nearly seven in ten individuals experiencing chronic homelessness were staying outdoors, in abandoned buildings, or other locations not suitable for human habitation rather than staying in shelters, reflecting the high degree of vulnerability of this population.
- In 2017, there were nearly 94,000 more permanent supportive housing (PSH) beds dedicated to people with chronic patterns of homelessness than there were in 2010.

**GOAL**

Prevent and end homelessness among Veterans

- Between 2010 and 2017, the number of veterans experiencing homelessness was cut nearly in half. Veteran homelessness has dropped by 46 percent, or by more than 34,000 people since 2010.
- On a single night in January 2017, just more than 40,000 veterans were experiencing homelessness. A majority (62%) were staying in emergency shelters or transitional housing programs.

**GOAL**

Prevent and end homelessness for families, youth, and children

- In January 2017, about 185,000 people in families with children experienced homelessness, about 57,000 fewer people than in 2010, a 24 percent decline.
- Just fewer than 22,000 people were in families with children in which the head of household was under the age of 25.
- More than 40,000 people under the age of 25 were unaccompanied youth—that is, homeless on their own rather than as part of a family. About 36,000 youth between the ages of 18 and 24 were homeless by themselves, as were about 4,800 youth under the age of 18.

**GOAL**

Set a path to ending all types of homelessness

- In January 2017, almost 554,000 people were homeless on a single night, with nearly two-thirds (65%) found in emergency shelters or transitional housing programs.
- While the number of people experiencing homelessness increased by just under one percent between 2016 and 2017, homelessness has declined by more than 83,000 people since 2010, a 13 percent reduction. The recent increase in homelessness is attributable to an increase in the number of individuals staying in unsheltered locations in major cities.
The Department of Housing and Urban Development (HUD) releases the Annual Homeless Assessment Report to Congress (AHAR) in two parts. Part 1 provides Point-in-Time (PIT) estimates, offering a snapshot of homelessness—both sheltered and unsheltered—on a single night. The one-night counts are conducted during the last 10 days of January each year. The PIT counts also provide an estimate of the number of people experiencing homelessness within particular homeless populations, such as people with chronic patterns of homelessness and veterans experiencing homelessness.

This year serves as the baseline year for estimates of unaccompanied youth, that is, people under the age of 25 who are experiencing homelessness on their own, not in the company of their parent or guardian, and who are not part of a family. Also for the first time this year, Part 1 of the AHAR includes some examination of the changes in demographic characteristics of people experiencing homelessness.

To understand our nation’s capacity to serve people who are currently or formerly experiencing homelessness, this report also provides counts of beds in emergency shelters, transitional housing programs, safe havens, rapid rehousing programs, permanent supportive housing programs, and other permanent housing.

In 2017, the PIT estimates of people experiencing homelessness in sheltered and unsheltered locations, as well as the number of beds available to serve them, were reported by 399 Continuums of Care (CoC) nationwide. These 399 CoCs covered virtually the entire United States. The Northern Mariana Islands are the newest CoC and reported PIT and HIC data for the first time in 2017.

HUD has methodological standards for conducting the PIT counts, and CoCs use a variety of approved methods to produce the counts. The guide for PIT methodologies can be found here: https://www.hudexchange.info/resource/4036/point-in-time-count-methodology-guide. HUD reviews the data for accuracy and quality prior to creating the estimates for this report.
Homelessness in the United States

National Estimates

The 2017 Annual Homeless Assessment Report to Congress: Part 1

Homelessness in the United States

Demographic Characteristics

On a Single Night in January 2017

- 553,742 people were experiencing homelessness in the United States.
- Most (65% or 360,867 people) were staying in emergency shelters or transitional housing programs, while 35 percent (192,875 people) were staying in unsheltered locations.
- Two in three people experiencing homelessness (67%) were adults in households without children. The remaining 33 percent of people experiencing homelessness did so as part of a family.
- For every 10,000 people in the United States, 17 were experiencing homelessness.

EXHIBIT 1.2: Homelessness
By Household Type and Sheltered Status, 2017

- Just under 61 percent of people experiencing homelessness (335,038 people) were men, and 39 percent (215,709 people) were women. Fewer than one percent were either transgender (2,092) or did not identify as male, female, or transgender (903).
- Gender varied by sheltered status. People staying in unsheltered locations were more likely to be men (71%), while people staying in emergency shelters or transitional housing programs were somewhat more likely to be women (55%).
- Nearly half of all people experiencing homelessness identified their race as white (47% or 260,979 people). Most other people experiencing homelessness identified as African American (41% or 224,937 people). Seven percent (35,745 people) of people experiencing homelessness identified as Hispanic or Latino.
- Most (65% or 360,867 people) were staying in shelters or transitional housing programs, while 35 percent (192,875 people) were staying in unsheltered locations.
- People in emergency shelters or transitional housing programs were more likely to be African American (46%) than people in unsheltered locations (33%).
- People in emergency shelters or transitional housing programs were more likely to be men (71%), while people staying in unsheltered locations were more likely to be women (55%).
- Seven percent (35,745 people) of people experiencing homelessness identified as Hispanic or Latino.
- Just under 61 percent of people experiencing homelessness (335,038 people) were men, and 39 percent (215,709 people) were women. Fewer than one percent were either transgender (2,092) or did not identify as male, female, or transgender (903).
- Gender varied by sheltered status. People staying in unsheltered locations were more likely to be men (71%), while people staying in emergency shelters or transitional housing programs were somewhat more likely to be women (55%).
- Nearly half of all people experiencing homelessness identified their race as white (47% or 260,979 people). Most other people experiencing homelessness identified as African American (41% or 224,937 people). Seven percent (35,745 people) of people experiencing homelessness identified as Hispanic or Latino.
- Most (65% or 360,867 people) were staying in shelters or transitional housing programs, while 35 percent (192,875 people) were staying in unsheltered locations.
- People in emergency shelters or transitional housing programs were more likely to be African American (46%) than people in unsheltered locations (33%).
- People in emergency shelters or transitional housing programs were more likely to be men (71%), while people staying in unsheltered locations were more likely to be women (55%).
- Seven percent (35,745 people) of people experiencing homelessness identified as Hispanic or Latino.

EXHIBIT 1.3: Demographic Characteristics of People Experiencing Homelessness 2017

- Total: 360,867
- Sheltered: 192,875
- Unsheltered: 167,992

Race

- White: 260,979
- African American: 224,937
- Asian: 6,760
- Native American: 16,796
- Pacific Islander: 8,525
- Multiple Races: 35,745

Gender

- Female: 215,709
- Male: 335,038
- Transgender: 2,092

Ethnicity

- Hispanic: 119,419
- Non-Hispanic: 434,323

<td>-12.6</td>
</tr>
</tbody>
</table>
Since 2016
- Homelessness increased by one percent (or 3,814 people) overall between 2016 and 2017.
- An increase in people staying in unsheltered locations accounts for the entire overall increase. Although the number of people staying in emergency shelters or transitional housing programs decreased for the third straight year (by 12,704 people, or 3% between 2016 and 2017), the number of people experiencing homelessness in unsheltered locations increased for a second straight year (by 16,518 people, or 9% between 2016 and 2017).
- Homelessness declined among children but increased among adults, especially younger adults. The number of children experiencing homelessness declined by five percent (5,990 people), but homelessness increased by seven percent (3,437) among those ages 18 to 24 and by two percent (6,367) among those ages 24 and older.
- Homelessness declined among women but increased among men and people identifying as transgender. The number of women experiencing homelessness declined by one percent (1,559 people), while the number of men increased by one percent (4,148 people) and the number of transgender people experiencing homelessness increased by 18 percent (or 322 people).
- The number of people experiencing homelessness who identified as Hispanic or Latino declined between 2016 and 2017, by two percent overall (or 1,880 people) and by 14 percent for sheltered people (or 12,141). However, the number of people who were Hispanic and staying in unsheltered locations increased by 30 percent (or 10,261 people) between 2016 and 2017.
- The number of people experiencing homelessness increased overall among people who identified as African American (by 5%), and declined slightly among people who identified as white (by 2%).
- The number of people experiencing homelessness in unsheltered locations increased for all racial groups except for those who identify as Pacific Islander or multi-racial. The largest increases were among people who identified as Asian (44%) and African American (23%).

Since 2007
- Homelessness declined by 14 percent (93,516 people) overall between 2007 and 2017.
- Despite the increase in people experiencing homelessness in unsheltered locations between 2016 and 2017, the decline in homelessness over the longer period, 2007-2017, reflected the large decreases among people staying in unsheltered locations. The number of unsheltered people declined by 25 percent (82,982 people) over the ten-year period, while the number staying in emergency shelters or transitional housing programs declined by eight percent (30,534 people).
### State Estimates

**Homelessness in the United States**

**On a Single Night in January 2017**

- Half of all people experiencing homelessness did so in one of five states: California (25% or 134,278 people); New York (16% or 89,503 people); Florida (6% or 32,190 people); Texas (4% or 23,548 people); or Washington (4% or 21,112 people).
- California accounted for nearly half of all unsheltered people in the country in 2017 (49% or 91,642 people). Florida had the second highest share of the unsheltered homeless population in the U.S., with eight percent (15,079 people).
- In four states, more than half of all people experiencing homelessness lived in unsheltered locations: California (68%), Nevada (58%), Oregon (57%), and Hawaii (53%).
- In two states, fewer than five percent of all people experiencing homelessness did so without shelter. In Iowa, just four percent of people experiencing homelessness were unsheltered (104 people), while in Nebraska, just under five percent of people experiencing homelessness were unsheltered (120 people).

* Due to methodological changes, Colorado, North Dakota, South Dakota, Michigan, and Wyoming were excluded from the list of largest decreases from 2007–2017.
The number of people experiencing homelessness declined in 30 states and the District of Columbia between 2016 and 2017. The largest absolute decreases were in Georgia (2,735 fewer people), Massachusetts (2,043 fewer people), and Florida (1,369 fewer people). The largest percentage decreases were in South Carolina (23%), Georgia (21%), and Louisiana (17%).

The number of people experiencing homelessness increased in 20 states between 2016 and 2017. The largest absolute increases were in California (16,136 people), New York (3,151 people), and Oregon (715 people). The largest percentage increases were in North Dakota (18%), California (14%), New Mexico (10%), and Vermont (10%).

The number of people experiencing homelessness declined in 36 states between 2007 and 2017. The largest decreases were in Texas (16,240 fewer people or 41%), Florida (15,879 people or 33%), and Georgia (9,465 people or 48%).

The number of people experiencing homelessness increased in 14 states, plus the District of Columbia, between 2007 and 2017. The largest absolute increases were in New York (28,902 more people or 43%), Massachusetts (2,438 people or 16%), and the District of Columbia (2,153 people or 41%).

Despite a national increase between 2016 and 2017, the number of people experiencing homelessness declined in 30 states and the District of Columbia during that time period.
Continuums of Care (CoC) Were Divided into Three Geographic Categories

Major city CoCs (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC. Smaller city, county, and regional CoCs (n=306) are jurisdictions that are neither one of the 50 largest cities in the United States nor Balance of State or Statewide CoCs. Balance of State (BoS) or statewide CoCs (n=40) are typically composed of multiple rural counties or represent an entire state.

On a Single Night in January 2017

- Nearly one of every four people experiencing homelessness did so in New York City or Los Angeles. Nearly all people experiencing homelessness in New York City were sheltered (96%). By comparison, only 25 percent of those experiencing homelessness in Los Angeles were sheltered in 2017.
- Some of the most populous major cities were not among those with the largest homeless populations. Chicago, Houston, and Phoenix were among the five largest cities in the country but were not among the cities with the largest numbers of people experiencing homelessness. In contrast, Seattle was the 18th largest city in the country but had the third largest homeless population. The District of Columbia was 21st in total population and had the fifth largest homeless population.
- In two major city CoCs, fewer than five percent of all people experiencing homelessness did so without shelter. Those CoCs were: Omaha/Council Bluffs (4% or 57 people) and Boston (3% or 186 people). In three major city CoCs, all in California, more than 70 percent of people experiencing homelessness were unsheltered. Those were: Fresno/Madera County (76%), Los Angeles (75%), and San Jose/Santa Clara (74%).

Changes Over Time

- The number of all people experiencing homelessness increased in major cities and decreased elsewhere between 2016 and 2017. The number of people experiencing homelessness in major cities increased by just over five percent (13,922 people) between 2016 and 2017, driving the increase in homelessness nationwide. More specifically, increases in unsheltered homelessness in major cities drove the national increase, with 17,139 more unsheltered people in those CoCs (an increase of 21%).
- The number of people who experienced homelessness decreased by three percent (6,386 fewer people) in smaller cities, counties, and regional CoCs, and by four percent (3,308 fewer people) in balance of state (BoS) and statewide CoCs.
- In addition to increasing in major cities, the number of people experiencing homelessness without shelter also increased in smaller cities, counties, and regional CoCs between 2016 and 2017, but the number of unsheltered homeless people declined in BoS and statewide CoCs.
- The number of people experiencing homelessness who stayed in emergency shelters or transitional housing programs dropped by two percent (3,217 fewer people) in major cities, by three percent (1,624 people) in BoS and statewide CoCs, and by six percent (7,539 people) in smaller cities, counties, and regional CoCs.
- Across the longer time period, 2007-2017, homelessness declined across all combinations of CoC categories and shelter status, except for sheltered homelessness in major cities, which increased by four percent. Unsheltered homelessness in major cities declined by nine percent over the same period.
- Unsheltered homelessness in smaller cities, counties, and regional CoCs declined by 38 percent between 2007 and 2017.

EXHIBIT 1.9: Percent of People Experiencing Homelessness By CoC Category and Sheltered Status, 2017

Changes Over Time

- The number of all people experiencing homelessness increased in major cities and decreased elsewhere between 2016 and 2017. The number of people experiencing homelessness in major cities increased by just over five percent (13,922 people) between 2016 and 2017, driving the increase in homelessness nationwide. More specifically, increases in unsheltered homelessness in major cities drove the national increase, with 17,139 more unsheltered people in those CoCs (an increase of 21%).
- The number of people who experienced homelessness decreased by three percent (6,386 fewer people) in smaller cities, counties, and regional CoCs, and by four percent (3,308 fewer people) in balance of state (BoS) and statewide CoCs.
- In addition to increasing in major cities, the number of people experiencing homelessness without shelter also increased in smaller cities, counties, and regional CoCs between 2016 and 2017, but the number of unsheltered homeless people declined in BoS and statewide CoCs.
- The number of people experiencing homelessness who stayed in emergency shelters or transitional housing programs dropped by two percent (3,217 fewer people) in major cities, by three percent (1,624 people) in BoS and statewide CoCs, and by six percent (7,539 people) in smaller cities, counties, and regional CoCs.
- Across the longer time period, 2007-2017, homelessness declined across all combinations of CoC categories and shelter status, except for sheltered homelessness in major cities, which increased by four percent. Unsheltered homelessness in major cities declined by nine percent over the same period.
- Unsheltered homelessness in smaller cities, counties, and regional CoCs declined by 38 percent between 2007 and 2017.

EXHIBIT 1.10: CoCs with the Largest Numbers of People Experiencing Homelessness By CoC Category, 2017

- The number of people experiencing homelessness who stayed in emergency shelters or transitional housing programs dropped by two percent (3,217 fewer people) in major cities, by three percent (1,624 people) in BoS and statewide CoCs, and by six percent (7,539 people) in smaller cities, counties, and regional CoCs.
- Across the longer time period, 2007-2017, homelessness declined across all combinations of CoC categories and shelter status, except for sheltered homelessness in major cities, which increased by four percent. Unsheltered homelessness in major cities declined by nine percent over the same period.
- Unsheltered homelessness in smaller cities, counties, and regional CoCs declined by 38 percent between 2007 and 2017.

The 2017 Annual Homeless Assessment Report to Congress: Part 1

Homelessness in the United States

Data source: PIT 2007–2017; Excludes Puerto Rico and U.S. territories
On a Single Night in January 2017
- There were 369,081 people experiencing homelessness in households without children, representing 67 percent of the total homeless population.
- Almost half of all people experiencing homelessness as individuals were staying in unsheltered locations, 48 percent or 175,937 people.

Demographic Characteristics
- Most individuals experiencing homelessness (88 percent) were over the age of 24. People between 18 and 24 years old made up just 10 percent of homeless individuals, and only one percent of homeless individuals were under 18 years old.
- More than seven in ten people homeless as individuals were men, 71 percent or 262,011 men. The remaining 29 percent were women (just over 28 percent or 104,315 women), transgender, or people who did not identify as male, female or transgender.
- Women made up a somewhat greater share of sheltered individuals (30%) than of unsheltered individuals (26%).
- Across both sheltered and unsheltered people experiencing homelessness as individuals, 19 percent identified themselves as Hispanic or Latino. They were much more likely to be staying in unsheltered locations than in shelters. Almost a quarter unsheltered individuals were Hispanic (23%) compared to just 15 percent of sheltered individuals identifying as Hispanic.
- Just over half of people experiencing homelessness as individuals were white (52% or 192,671 people). An even higher percentage of unsheltered homeless individuals were white (55% or 96,448 people), while African Americans accounted for 36 percent of all homeless individuals (or 132,399 people) but only 31 percent of unsheltered individuals (or 53,844 people).
Since 2016

- The number of people experiencing homelessness as individuals—that is, in households without children—increased by four percent (13,869 more individuals) between 2016 and 2017. This increase was driven entirely by an increase in the number of unsheltered individuals (a 12% rise). Sheltered homelessness among individuals decreased by 4,864 people (or 3%).
- Homelessness among individuals increased across all age groups. The number of children (people under 18) experiencing homelessness as individuals increased by 997, the number of people between the ages of 18 and 24 increased by 4,179, and the number of people homeless as individuals over the age of 24 increased by 8,693.
- For each age group, increases were driven entirely by increases in the number of people experiencing homelessness in unsheltered locations, while the number of sheltered individuals declined across all age groups.
- For people over the age of 24 experiencing homelessness as individuals, the unsheltered number increased by nine percent (12,951 people), while the number of those sheltered decreased by two percent (or 4,268 fewer people).

Since 2007

- Over a longer time period, 2007-2017, individual homelessness declined by 11 percent (43,619 fewer people). This decline was comprised of both a decline in the number of homeless individuals in unsheltered locations—which dropped by 12 percent (23,890 fewer people)—and in sheltered locations, which dropped by nine percent (or 19,929 people).

The increase in the number of people experiencing homelessness as individuals was driven entirely by an increase in the number of unsheltered individuals (a 12% rise).

There were five percent more women experiencing homelessness as individuals in 2017 than in 2016, driven by a 14 percent rise in unsheltered women. There were three percent more men and 11 percent more unsheltered men. The only group for whom the rise in the sheltered number drove an overall increase was people who identified as transgender (310 more transgender individuals in shelter in 2017 than in 2016).

- The number of people experiencing homelessness as individuals who identified as Hispanic or Latino increased by 14 percent overall, compared to two percent for non-Hispanic or Latino individuals. Unsheltered homelessness among Hispanic individuals increased at a greater rate than among non-Hispanic individuals (by 35% compared to 6%). At the same time, the Hispanic population experienced declines in sheltered homelessness at a greater rate than non-Hispanic individuals (a 7% decline compared to a 2% decline).
- Homelessness among African American individuals increased by six percent overall (or 7,299 people) and by 27 percent among the unsheltered population (or 11,399 people). Homelessness among white individuals increased by two percent overall (or 2,856 people) and by seven percent among the unsheltered population (or 5,944 people).
On a Single Night in January 2017
- California accounted for 31 percent of all people experiencing homelessness as individuals in the United States and 51 percent of all unsheltered individuals.
- More than half of all the nation’s homeless individuals were in four states: California (31% or 112,766 people), New York (10% or 37,390 people), Florida (6% or 22,768 people), and Texas (5% or 16,708).
- In eight states, more than half of individuals experiencing homelessness were staying in unsheltered locations: California (78%), Hawaii (72%), Nevada (63%), Oregon (59%), Mississippi (59%), Arkansas (55%), Washington (54%), and Florida (52%).

Changes Over Time
- Between 2016 and 2017, the number of individuals experiencing homelessness increased in 22 states. The largest absolute increases were in California (15,096 people), New York (2,075 people), and Colorado (1,121 people). The states with the largest percentage increases were North Dakota (26%), Wyoming (20%), and New Mexico (20%).
- The number of homeless individuals declined between 2016 and 2017 in 28 states and the District of Columbia. The largest absolute declines occurred in Georgia (1,843 fewer people), Florida (1,433 fewer people), and South Carolina (862 fewer people). The largest percentage declines were in South Carolina (23%), Georgia (20%), and Louisiana (19%).
- In 23 states, the number of individuals experiencing homelessness increased between 2007 and 2017. The largest increase was in New York (9,334 more people), a 33 percent rise. California and Washington also had large increases (1,804 and 1,492 more people).
- During the same ten-year period, 27 states and the District of Columbia experienced a decline in the number of homeless individuals. The largest declines were experienced in Florida (10,272), Texas (9,598), and Georgia (5,098).

*Due to methodological changes, Michigan was excluded from the list of largest decreases from 2007-2016.*

On a Single Night in January 2017

- Major cities accounted for more than half of all people experiencing homelessness as individuals (52% or 282,491 people). Smaller cities, counties, and regional CoCs accounted for 35 percent (or 190,077 people), and BoS or statewide CoCs had 13 percent (46,254 people).
- Three of the ten major cities with the largest numbers of individuals experiencing homelessness were not also among the cities with the largest homeless populations overall. Oakland, Denver, and Phoenix replaced Boston, Philadelphia, and the District of Columbia as the major cities with the largest numbers of homeless individuals.
- Major cities accounted for a larger share of the national total of unsheltered individuals than of sheltered individuals (56% compared to 48%).
- Three major cities reported that more than 80 percent of homeless individuals were unsheltered. All three were in California: Fresno (88%), Los Angeles (84%), and San Jose (82%).
- Of smaller cities, counties, and regional CoCs, nine reported individual unsheltered rates exceeding 90 percent. Two of the highest rates were in the CoC abutting Lake Okeechobee (Hendry, Hardee, Highlands counties) in Florida (98%) and in the Inyo, Mono, and Alpine counties in California, which border Nevada (97%).
- The lowest rates of unsheltered homeless individuals in smaller cities, counties, and regional CoCs were in Sioux City/Dakota Woodbury Counties, IA at one percent and Sullivan County, NY at two percent.
- The Nebraska BoS had the lowest rates of unsheltered individuals, at five percent. Iowa BoS also reported low rates, at six percent.

Continuums of Care (CoC) Were Divided into Three Geographic Categories

Major city CoCs (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.

Smaller city, county, and regional CoCs (n=306) are jurisdictions that are neither one of the 50 largest cities nor the major cities with the largest numbers of individuals experiencing homelessness. CoCs with the largest numbers of homeless individuals are typically composed of multiple rural counties or represent an entire state.

Excludes CoCs with less than 100 total homeless people.
Changes Over Time

- Between 2016 and 2017 individual homelessness increased by nine percent (15,540 people) in the nation’s major cities. This increase was driven by a 22 percent increase in unsheltered individuals (17,663 more people). Los Angeles accounted for 60% of this increase.

- After Los Angeles, New York reported the second largest increase, with 2,159 more individuals experiencing homelessness. This increase was evenly split between people staying in sheltered and unsheltered locations.

- Smaller cities, counties, and regional CoCs saw a slight decline in the number of people experiencing homelessness as individuals (1% or 1,253 fewer people) since 2016. There was a three percent decline in the number of sheltered individuals (2,499 fewer people), which offset a two percent increase (1,246 more people) in the number of unsheltered individuals.

- In BoS and statewide CoCs, individual homelessness from 2016 to 2017 remained flat.

- From 2007 to 2017, smaller cities, counties, and regional CoCs experienced the largest declines in the number of homeless individuals, with 34,203 fewer people (or 21%). The number of unsheltered individuals in this CoC category declined by 27 percent (or 21,334) during the same time period.

- BoS and statewide CoCs experienced declines in homeless individuals between 2007 and 2017, with 13 percent fewer homeless individuals, nine percent fewer sheltered individuals, and 17 percent fewer unsheltered individuals in 2017 than in 2007.

- The number of homeless individuals in major cities in 2017 was slightly lower than the number of homeless individuals in 2007 (1% fewer people). However, in recent years the number of homeless individuals, unsheltered individuals in particular, in major cities has risen sharply.

In 2017 there were only two percent more unsheltered individuals in major cities than there were in 2007 but 47 percent more than there were in 2014, the year after which the number began to rise.

Between 2016 and 2017, individual homelessness increased by nine percent (15,540 people) in the nation’s major cities. Los Angeles accounted for 60% of this increase.
Demographic Characteristics

• Children under the age of 18 made up 59 percent of people experiencing homelessness in families. Most of the adults were 25 years of age or older.
• Children were especially likely to be sheltered rather than unsheltered, with only eight percent of children found in unsheltered locations.
• The racial composition of people in families with children varied by whether they were sheltered or unsheltered. More than half of sheltered people in families with children were African American (53%), while African Americans represented just 21 percent of the unsheltered population. About a third (35%) of sheltered people in families with children were white, while people identifying as white accounted for 59 percent of the unsheltered population.
• More than 25 percent of people experiencing homelessness in families with children were Hispanic or Latino (27%), and this was higher than the Hispanic share of people experiencing homelessness as individuals (18%). Hispanics comprised a slightly larger share of sheltered people in families (28%) and a smaller share of those in unsheltered locations (22%).
Additional Characteristics

- Only five percent of homeless people in families with children were in households with chronic patterns of homelessness (8,457 people). Those with chronic patterns of homelessness were more likely to be unsheltered than people in homeless families overall, with three in ten (29% or 2,477 people) currently staying in unsheltered locations.
- Approximately 17 percent of people in families who were under the age of 25 were people in parenting youth households. Nearly all of these parents (99%) were between 18 and 24 years of age.
- Only six percent of people in families with a parent under 25 were found in unsheltered locations.

Since 2016

- The number of homeless people in families with children counted on a single night declined by five percent (or 10,055 people) between 2016 and 2017, as did the number of homeless family households (3,294 households).
- Declines occurred among both sheltered people in families with children (by 5% or 7,840 people) and unsheltered people in families with children (by 12% or 2,215 people).
- Between 2016 and 2017, family homelessness declined across all age groups, and the number of family members found in unsheltered locations declined for most, but not all, age groups. The number of children experiencing unsheltered homelessness with their parents declined by 15 percent. The only age group to experience an increase in unsheltered homelessness was people between the ages 18 and 24, an increase of 317 people or 26 percent. People in this age group may be the parent of the family, or they may be young adults in a household that has both another adult and at least one child under 18.
- Between 2016 and 2017, the number of people in families with children experiencing homelessness who identified as Hispanic or Latino declined by 17 percent, or 10,469 fewer people, including an eight percent decline in unsheltered homelessness. While sheltered homelessness among Hispanics dropped, it increased for non-Hispanic or Latino people in families over the same time period (by 2% or 2,300 people).
- Homelessness increased among people in families who identified as African American (by 3%), while declining among people in families with children who identified as white (by 10%).

Since 2007

- Over the last 10 years, the number of homeless people in families dropped by 21 percent (49,897 fewer people), and the number of homeless family households dropped by 26 percent (20,564 family households).
- This decline was driven by a substantial drop in the number of people counted in families with children staying in unsheltered locations. Between 2007 and 2017, the number of unsheltered people in families with children declined by 70 percent (or 39,232 people). The number of people in families with children staying in sheltered locations also declined, though by a more modest margin (by 6% or 10,605 people).
Homelessness in the United States

Homeless Families with Children

National Estimates

• On a Single Night in 2017
  - Nearly 30 percent of all people in families with children experiencing homelessness were in New York, or 52,113 people. All but 55 people (or 0.1%) were staying in sheltered locations.
  - More than half of all homeless people in families with children were in four states: New York (29% or 52,113 people), California (12% or 21,522 people), Massachusetts (6% or 11,298 people), and Florida (5% or 9,422 people).
  - California, Florida, Oregon, and Colorado together accounted for nearly two-thirds of all unsheltered people in families with children (63%).
  - In five states, more than one third of people experiencing homelessness in families with children were unsheltered: North Dakota (63%), Oregon (52%), Wyoming (49%), Montana (35%), and Florida (34%). These rates were considerably higher than the national rate of just under 10 percent.

• Changes Over Time
  - Between 2016 and 2017, 13 states had increases in the number of people in families with children experiencing homelessness. The largest increases were in New York and California, each of which had more than 1,000 more homeless people in families in 2017 than in 2016.
  - Thirty-seven states and the District of Columbia experienced declines between 2016 and 2017. Thirty-two states experienced a decline of more than 100 people. California experienced a large decline (by 6,512 people or 23%). Other states with large decreases over the last decade include Texas (6,642 or 49%), Florida (5,607 or 37%), Massachusetts (5,239 or 63%), and New Jersey (5,239 or 63%).

* Due to methodological changes, Michigan was excluded from the list of largest decreases from 2007–2017.

Approximately 17 percent of people in families who were under the age of 25 were people in parenting youth households.
On a Single Night in January 2017

- More than half of all people experiencing homelessness in families with children were in the 50 largest cities (92,414 people). Smaller cities, counties and regional CoCs had 34 percent of the total, and the remaining 16 percent were in BoS and statewide CoCs.
- New York City accounted for one quarter all family homelessness in the U.S., or 45,377 people experiencing homelessness in families with children. While this is not surprising given the size of New York City, some large cities have relatively low numbers of people in homeless families compared to the size of the city. For example, Houston has the fourth largest population in the country but is not among the ten cities with the largest numbers of people experiencing homelessness in families with children.
- The communities with the highest rates of unsheltered homelessness among families in major cities and smaller cities, counties, and regional CoCs were, for the most part, in warmer climates like California and Florida. However, the highest rates of unsheltered family homelessness for BoS or statewide CoCs were found in colder climates, with the exception of Oklahoma Balance of State.

Continuums of Care (CoC) Were Divided into Three Geographic Categories

Major city CoCs (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.

Smaller city, county, and regional CoCs (n=306) are jurisdictions that are neither one of the 50 largest cities in the United States nor Balance of State and Statewide CoCs.

Balance of State (BoS) and statewide CoCs (n=40) are typically composed of multiple rural counties or represent an entire state.
Between 2016 and 2017, the number of homeless people in families with children declined in all three types of CoCs. The largest percentage change occurred in BoS or statewide CoCs (by 3,381 or 10%), followed by smaller cities, counties, and regional CoCs (by 3,133 people or 8%), with more modest declines in major cities (1,618 or 2%).

New York City and Los Angeles have experienced considerable fluctuations in the number of homeless people in families in recent years. These two communities experienced the largest increases between 2014 and 2015, the largest declines in people experiencing homelessness in families with children between 2015 and 2016, and between 2016 and 2017 represented two of the top three increases. Los Angeles had the largest increase between 2016 and 2017, with 1,978 more people (or 32%). In New York, there were 819 more people in families experiencing homelessness, a two percent increase.

Over a longer time period, 2007-2017, sheltered homelessness declined dramatically across CoC categories. Homelessness among people in families in major cities declined by 82 percent (12,162 fewer people), 69 percent in smaller cities, counties, and regional CoCs (17,470 people), and by 67 percent in BoS and statewides (10,231 people).

Changes over Time

Between 2016 and 2017, the number of homeless people in families with children declined in all three types of CoCs. The largest percentage change occurred in BoS or statewide CoCs (by 3,381 or 10%), followed by smaller cities, counties, and regional CoCs (by 3,133 people or 8%), with more modest declines in major cities (1,618 or 2%).

New York City and Los Angeles have experienced considerable fluctuations in the number of homeless people in families in recent years. These two communities experienced the largest increases between 2014 and 2015, the largest declines in people experiencing homelessness in families with children between 2015 and 2016, and between 2016 and 2017 represented two of the top three increases. Los Angeles had the largest increase between 2016 and 2017, with 1,978 more people (or 32%). In New York, there were 819 more people in families experiencing homelessness, a two percent increase.

Over a longer time period, 2007-2017, sheltered homelessness declined dramatically across CoC categories. Homelessness among people in families in major cities declined by 82 percent (12,162 fewer people), 69 percent in smaller cities, counties, and regional CoCs (17,470 people), and by 67 percent in BoS and statewides (10,231 people).
In recent years, HUD has expanded Point-in-Time (PIT) count data collection to include information on the number of young adults and children who are experiencing homelessness without a parent or guardian present. Unaccompanied youth are people under the age of 25 who are not accompanied by a parent or guardian and are not a parent presenting with or sleeping in the same place as his or her children. These estimates include both unaccompanied homeless youth who are under the age of 18, and are a part of the households with only children population and unaccompanied homeless youth between the ages of 18 and 24, who are a part of the households without children population. HUD and its federal partners selected the PIT counts from January 2017 as the baseline measure of homelessness among unaccompanied youth. The baseline measure will be used to assess future trends in the number of unaccompanied youth experiencing homelessness in the United States.

On a Single Night in January
- There were 40,799 unaccompanied homeless youth under the age of 25. This represents just over seven percent of the total homeless population and eleven percent of people experiencing homelessness as individuals.
- In addition, there were 9,436 parents and 12,152 children in families in which the parent was a youth. They are not included in this chapter, but are described in the Families chapter of this report.
- People between the ages of 18 and 24 account for most of the unaccompanied homeless youth population (88% or 36,010 people). The remaining 12 percent (or 4,789 people) were under the age of 18.
- Unaccompanied homeless youth are more likely to be unsheltered (55%) than all people experiencing homelessness (35%) or people experiencing homelessness as individuals (48%). The younger unaccompanied homeless youth—people under age 18—are a slightly more likely to be unsheltered (56%) than unaccompanied homeless youth age 18 to 24 (64%).

Demographic Characteristics of Unaccompanied Youth
- The majority of unaccompanied homeless youth experiencing homelessness were men or boys (62% or 25,131 people). The size of the majority varied by sheltered status. More than two thirds of unsheltered unaccompanied homeless youth were male (67% or 14,929 people) compared to 55 percent of sheltered unaccompanied homeless youth.
- Transgender youth accounted for approximately two percent of the unaccompanied homeless youth population, regardless of sheltered status. While accounting for an extremely small share of the overall unaccompanied homeless youth population, people who did not identify as male, female, or transgender comprised a higher share of the unsheltered population than the sheltered population (0.5% compared to 0.2%).
- More than one-third (37%) of unaccompanied homeless youth are women or girls, which is a larger share than those experiencing homelessness as individuals (28%).
- One-quarter of unaccompanied homeless youth were Hispanic or Latino (or 10,296 people). The rate is higher among unsheltered unaccompanied homeless youth (31% or 6,785 people). Unaccompanied homeless youth were more likely to be Hispanic or Latino than all homeless individuals (25% of youth were Hispanic or Latino compared to 19%), demonstrating that younger individuals were more likely Hispanic than older individuals.
- Nearly half of unaccompanied homeless youth were white (49%), and about one-third (34%) were African American. Multiracial youth accounted for 10 percent. Native American youth represented four percent of the homeless youth population, and Asian and Pacific Islander youth together accounted for the remaining three percent.
- Compared to all homeless individuals (including people over the age of 24), unaccompanied homeless youth were more likely to identify as a race other than white or African American (18% versus 12%).

- Compared to all homeless individuals (including people over the age of 24), unaccompanied homeless youth were more likely to identify as a race other than white or African American (18% versus 12%).
Unaccompanied homeless youth are much more likely to be unsheltered (55%) than all people experiencing homelessness (35%) or people experiencing homelessness as individuals (48%).

- California accounted for 58 percent of all unsheltered unaccompanied youth (12,749 people). The state with the next largest number was Nevada, with 90 percent of unaccompanied homeless people under 25 in unsheltered situations, or 1,931 people.
- Nevada had the highest rate of unsheltered unaccompanied youth, with 89 percent (or 1,931 people) staying in places not meant for human habitation. California and Hawaii followed, with 82 percent of unaccompanied youth in those states staying in unsheltered locations.
- Iowa had the lowest rate of unsheltered unaccompanied youth, with only four of the 140 youth staying in unsheltered locations (3%).

On a Single Night in January 2017
- California reported the largest numbers of unaccompanied homeless youth (15,458 people), which represents 38 percent of the national total. Other states with large numbers of unaccompanied homeless youth were: New York (2,829), Nevada (1,931), Washington (2,135), and Florida (2,019).

Unaccompanied homeless youth are much more likely to be unsheltered (55%) than all people experiencing homelessness (35%) or people experiencing homelessness as individuals (48%).
On a Single Night in January 2017

- More than half (55%) of all unaccompanied homeless youth were counted in the nation’s major cities. Major cities accounted for a much larger share of the unsheltered population (64%) than the sheltered population (43%).
- Smaller cities, counties, and regional CoCs had one-third of all unaccompanied homeless youth. These CoCs accounted for a smaller share of unsheltered youth (28%) than of sheltered youth (41%).
- BoS and statewide CoCs account for 12 percent of all unaccompanied homeless youth, nine percent of sheltered youth and 15 percent of sheltered youth.
- Five major cities (Los Angeles, San Jose, Las Vegas, New York City, and Seattle) accounted for one-third of all unaccompanied homeless youth. These CoCs accounted for a smaller share of unsheltered youth (28%) than of sheltered youth (41%).
- BoS and statewide CoCs account for 12 percent of all unaccompanied homeless youth, nine percent of sheltered youth and 15 percent of sheltered youth.
- Five major cities (Los Angeles, San Jose, Las Vegas, New York City, and Seattle) accounted for one-third of all unaccompanied homeless youth. These CoCs accounted for a smaller share of unsheltered youth (28%) than of sheltered youth (41%).
- Five major cities (Los Angeles, San Jose, Las Vegas, New York City, and Seattle) accounted for one-third of all unaccompanied homeless youth. These CoCs accounted for a smaller share of unsheltered youth (28%) than of sheltered youth (41%).
- Five major cities (Los Angeles, San Jose, Las Vegas, New York City, and Seattle) accounted for one-third of all unaccompanied homeless youth. These CoCs accounted for a smaller share of unsheltered youth (28%) than of sheltered youth (41%).

### Continuums of Care (CoC) Were Divided into Three Geographic Categories

**Major city CoCs** (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.

**Smaller city, county, and regional CoCs** (n=306) are jurisdictions that are neither one of the 50 largest cities in the United States nor Balance of State and Statewide CoCs.

**Balance of State (BoS) and statewide CoCs** (n=40) are typically composed of multiple rural counties or represent an entire state.

- Among smaller cities, counties, and regional CoCs, seven of the ten CoCs with the largest numbers of unaccompanied homeless youth experiencing homelessness were located in California. The CoC covering Monterey and San Benito Counties had the largest number (297).
- Eleven smaller cities, counties, and regional CoCs had rates of unsheltered unaccompanied youth above 90 percent. The highest rates were found in Santa Cruz, where 98 percent of unaccompanied homeless youth were staying in places not meant for human habitation, and Pasco County, Florida, which had an unsheltered rate of 96 percent.
- Of BoS and statewide CoCs, Hawaii BoS had the highest rate of unsheltered unaccompanied youth (95%), followed by Oregon BoS (77%).

Excludes CoCs with fewer than 100 unaccompanied youth.

Data source: PIT 2017; Excludes Puerto Rico and U.S. territories.
On a Single Night in January 2017

- 40,056 veterans were experiencing homelessness in the U.S., just over nine percent of all homeless adults.
- Three in five homeless veterans (62% or 24,690 veterans) were staying in emergency shelters or transitional housing programs, while two in five (38% or 15,366 veterans) were found in places not suitable for human habitation.
- Almost all veterans were experiencing homelessness in households without children (98% or 39,101 veterans). About two percent (955) were veterans who were homeless as part of a family.

Demographic Characteristics

- Nine in ten veterans experiencing homelessness were men (91% or 36,302 veterans).
- Nearly six in ten veterans experiencing homelessness (57%) were white, higher than the percent of all people experiencing homelessness who were white (47%), and slightly higher than the percentage of people in households without children who were white (52%). One-third of veterans experiencing homelessness were African American, and five percent were multiracial.
- Veterans experiencing homelessness were nearly half as likely to be Hispanic as individuals experiencing homelessness (10% compared to 19%) and less than half as likely as all people experiencing homelessness (10% compared to 22%).

Since 2016

- The number of homeless veterans increased by 585 people between 2016 and 2017.
- This 2016-2017 increase was driven entirely by an 18 percent increase in the number of veterans experiencing homelessness in unsheltered places (2,299 more veterans). Partly offsetting the increase in unsheltered veterans, the number of sheltered veterans decreased by 1,714 people (or 7%).
- The number of homeless veterans who were women increased by seven percent (243 additional female veterans), and the number of veterans who were men increased by one percent (347 additional male veterans). These increases were driven by increases in the unsheltered population for both genders.
- The number of veterans who were Hispanic increased between 2016 and 2017, by 585 people (or 17%). Hispanic veterans comprise 10 percent (347 additional male veterans), and the number of veterans who were men increased by one percent (347 additional male veterans). These increases were driven by increases in the unsheltered population for both genders.
- The number of veterans who were Hispanic increased between 2016 and 2017, by 585 people (or 17%). Hispanic veterans comprise 10 percent (347 additional male veterans), and the number of veterans who were men increased by one percent (347 additional male veterans). These increases were driven by increases in the unsheltered population for both genders.
- Increases among veterans experiencing homelessness were due entirely to increases among veterans in households without children. The number of veterans in families declined overall (by 16%), among sheltered veterans (by 11%) and unsheltered veterans (by 29%).

Since 2009

- Point-in-time data started to identify veterans in 2009. The number of veterans experiencing homelessness increased between 2009 and 2010 and then dropped every year until this past year.
- Since 2009, veteran homelessness has dropped considerably, with 45 percent (or 33,311) fewer veterans experiencing homelessness in 2017 than in 2009.

EXHIBIT 5C: Demographic Characteristics of Homeless Veterans 2017

EXHIBIT 5D: Change in Numbers of Homeless Veterans By Sheltered Status, 2009–2017

The 2017 Annual Homeless Assessment Report to Congress: Part 1
On a Single Night in January 2017
- Just under 30 percent of all veterans experiencing homelessness were in California (29% or 11,472 veterans).
- In three states, more than half of all veterans experiencing homelessness were unsheltered. Those states were: California (67%), Hawaii (62%), and Oregon (53%).
- Three states sheltered more than 95 percent of homeless veterans. In Nebraska, only one percent of veterans were unsheltered, in Rhode Island only three percent, and in New York five percent.
- Some states with large numbers of homeless veterans are not among the states with the largest numbers of veterans. Oregon had the fifth largest number of veterans experiencing homelessness, but the 25th largest number of veterans. Colorado had the seventh largest homeless veteran population and the 19th largest population of all veterans. In Virginia, the reverse was true. The state had the eighth largest population of veterans and was 25th in its population of veterans experiencing homelessness.

Since 2016
- While homelessness among veterans increased nationwide between 2016 and 2017, veteran homelessness decreased in 36 states and the District of Columbia. The largest absolute decreases were in Georgia (343 fewer veterans) and South Carolina (258). The largest percentage decrease was in Mississippi (60%), followed by North Dakota (36%), South Carolina (35%), and Utah (34%).
- The number of veterans experiencing homelessness increased in 14 states between 2016 and 2017. The largest absolute increases, and those driving the nationwide increase, were in California (1,860 more veterans), Washington (609), and Texas (432). The largest percentage increases were in Washington (41%), Kansas (28%), Texas (24%), and Montana (24%).
Since 2009
- Between 2009 and 2017, the number of veterans experiencing homelessness decreased in 45 states plus the District of Columbia, with the largest absolute decreases in California (6,501 fewer veterans), New York (4,635), and Florida (4,318). New York also had a large percentage decrease, 79 percent. Other large percentage decreases were in Mississippi (84%), Louisiana (81%), and Alabama (75%).
- The number of veterans experiencing homelessness increased in five states between 2009 and 2017. The largest absolute increases were in Washington (130 more veterans) and Hawaii (116). The largest percentage increases were in Vermont (54%) and Utah (33%).

</tbody>
</table>

On a Single Night in January 2017
- Nearly half of all homeless veterans were in major cities (48%). Smaller cities, counties, and regional CoCs accounted for a 39 percent, while 13 percent of homeless veterans were in BoS and statewide CoCs.
- Major cities accounted for a higher percentage of unsheltered veterans than of sheltered veterans (59% versus 44%). In contrast, smaller cities, counties, and regional CoCs had a larger share of all sheltered veterans (47%) than of unsheltered veterans (32%).
- Some major cities with the largest numbers of homeless veterans are not among the cities with the largest numbers of veterans. Seattle, WA has the second largest number of homeless veterans but was 34th in its number of all veterans. San Antonio, TX and Jacksonville, FL had the second and fifth largest numbers of veterans but was 34th in its number of all veterans. San Antonio, TX and Jacksonville, FL had the second and fifth largest numbers of veterans but was 34th in its number of all veterans. San Antonio, TX and Jacksonville, FL had the second and fifth largest numbers of veterans but was 34th in its number of all veterans. San Antonio, TX and Jacksonville, FL had the second and fifth largest numbers of veterans but was 34th in its number of all veterans.
- The five major cities with the highest percentage of homeless veterans staying in unsheltered locations were in California. Los Angeles had the highest rate, with 76 percent of homeless veterans staying in unsheltered locations there.

The smaller city, county, and regional CoCs of Santa Cruz City and County and Orange County in California had rates of unsheltered veterans at or above 85 percent (92% and 88%). Somerset County in New Jersey sheltered all veterans experiencing homelessness in 2017.
- Hawaii BoS and Georgia BoS had the highest rates of unsheltered veterans in the BoS and statewide category, with 86 percent and 75 percent, respectively.

Continuums of Care (CoC) Were Divided into Three Geographic Categories
Major city CoCs (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.
- Smaller city, county, and regional CoCs (n=306) are jurisdictions that are neither one of the 50 largest cities in the United States nor Balance of State and Statewide CoCs.
- Balance of State (BoS) and statewide CoCs (n=40) are typically composed of multiple rural counties or represent an entire state.

Changes over Time
- Between 2016 and 2017 all of the increases in veteran homelessness occurred in major cities. The number of veterans experiencing homelessness increased by 12 percent in major cities (2,026 more veterans) but declined across the other two categories of CoCs. In major cities, a 48 percent increase in the number of unsheltered veterans was only partly offset by a six percent decline in sheltered veterans.
- However, since these data were collected in 2009, the number of veterans experiencing homelessness has dropped considerably across all CoC categories. The number of veterans experiencing homelessness dropped by 31 percent in major cities and by 29 percent in both smaller cities, counties, and regional CoCs and BoS and statewide CoCs.
- Between 2009 and 2017, both smaller cities, counties, and regional CoCs and BoS and statewide CoCs experienced larger declines in the numbers of veterans in unsheltered locations (44% and 40%, respectively) than in sheltered locations (19% and 20%). In major cities the reverse was true. Since 2009 the number of veterans in shelter in major cities declined by 43 percent, and by five percent in unsheltered locations. This is due in large part to the recent uptick in unsheltered veterans in major cities.

National Estimates
Ch预先ically Homeless Individuals

EXHIBIT 6.1: PIT Estimates of Chronically Homeless Individuals By Sheltered Status, 2007–2017

On a Single Night in January 2017
- Nearly one-quarter of individuals experiencing homelessness had chronic patterns of homelessness (86,962 of 369,081 homeless individuals, or 24%).
- Nearly seven in ten chronically homeless individuals (69% or 60,333 people) were staying in unsheltered locations such as under bridges, in cars, or in abandoned buildings. This is much higher than the unsheltered rate for all people experiencing homelessness as individuals in the United States, which was 48 percent.

EXHIBIT 6.2: Change in Numbers of Chronically Homeless Individuals By Sheltered Status, 2007–2017

Data source: PIT 2007–2017

Since 2016:
- For the first time since 2008, the number of individuals with chronic patterns of homelessness increased. Between 2016 and 2017, chronic homelessness increased by 12 percent overall (or by 9,476 people), by eight percent (or 2,033) among sheltered individuals, and by 14 percent (or 7,443 people) among unsheltered individuals.
- Individuals with chronic patterns of homelessness made up a slightly larger share of all homeless individuals in 2017 (24%) than in 2016 (22%).

Since 2007:
- While chronic homelessness increased recently, 27 percent fewer individuals had chronic patterns of homelessness in 2017 than did in 2007, a decline of 32,851 people. The number of individuals who were unsheltered and chronically homeless decreased by 17,712 (23%), and the number of sheltered chronically homeless individuals declined by 15,139 (36%).
- Between 2007 and 2017, the share of individuals experiencing homelessness who had chronic patterns of homelessness declined from 29 percent to 24 percent.
- The share of chronically homeless individuals who were unsheltered was higher in 2017 (69%) than in 2007 (65%).
Homelessness in the United States
National Estimates
Chronically Homeless Individuals
State Estimates

By State, 2017

EXHIBIT 6

On a Single Night in January 2017
- California accounted for 42 percent of all individuals with chronic patterns of homelessness in the United States, which is higher than its share of all individuals experiencing homelessness in the United States (31%). California accounted for more than half of the nation’s unsheltered chronically homeless individuals (53%).
- More than half of all chronically homeless individuals were in three states: CA (42%), NY (6%), and FL (6%).
- In nine states, the percent of chronically homeless individuals staying in unsheltered locations exceeded 70 percent, with California and Hawaii reporting the highest rates (88% and 90%).
- Wyoming and Maine sheltered all individuals with chronic patterns of homelessness. Rhode Island and Indiana also had low rates of unsheltered chronic homelessness, with 10 percent of individuals living in unsheltered locations in Rhode Island and 11 percent in Indiana.
- Individuals were most likely to have chronic patterns of homelessness if they were in the District of Columbia, with 41 percent of homeless individuals there experiencing chronic homelessness. Three states had rates above 30 percent: New Mexico (38%), Hawaii (35%), and California (32%). These three states and the District of Columbia also had among the highest rates of homeless individuals with chronic patterns of homelessness in 2016.

The 2017 Annual Homeless Assessment Report to Congress: Part 1

- WISCONSIN

EXHIBIT 6.5: Largest Change in the Numbers of Chronically Homeless Individuals
By State, 2007–2017

Largest Increases

- CALIFORNIA
- WASHINGTON
- HAWAII
- IDAHO
- OREGON

Largest Decreases

- GEORGIA
- FLORIDA
- TENNESSEE
- NEW HAMPSHIRE
- SOUTH CAROLINA

Due to methodological changes, Michigan was excluded from the list of largest changes 2007-2017.
Changes Over Time

- Over half of all states, 28, experienced an increase between 2016 and 2017 in the number of individuals with chronic patterns of homelessness. California by far had the largest increase, with 5,996 more chronically homeless individuals in 2017 than in 2016. The next largest increase occurred in Washington, with 2,050 more individuals with chronic patterns of homelessness there in 2017. Other states with the largest absolute increases were: New York (979), Colorado (484), and Illinois (418).
- Of the 22 states and the District of Columbia that had declines in the number of chronically homeless individuals between 2016 and 2017, the largest absolute decreases occurred in Georgia (695 fewer people), Florida (464), and Tennessee (345).
- Over a longer period of time, 2007-2017, 38 states and the District of Columbia had decreases in chronic homelessness among individuals. California experienced the largest decline in the number of chronically homeless individuals, with 4,543 fewer chronically homeless individuals in 2017 than in 2007. Texas also experienced a considerable decline, with 4,434 fewer chronically homeless individuals. Other states with large absolute declines were: Florida (2,512 fewer people), Ohio (1,583), New Jersey (1,570), Massachusetts (1,552), and Georgia (1,521).

- Among the 12 states that experienced increases in the number of individuals with chronic patterns of homelessness between 2007 and 2017, the largest absolute increases occurred in Washington, with 1,754 more chronically homeless individuals in 2017 than in 2007. Other states with large absolute increases were: Hawaii (810 more chronically homeless individuals), Idaho (296), and Oregon (291).

More than half of all chronically homeless individuals were in three states: CA (42%), NY (6%), and FL (6%).
The 2017 Annual Homeless Assessment Report to Congress: Part 1

The 2017 Annual Homeless Assessment Report to Congress: Part 1

On a Single Night in January 2017

- Los Angeles had the largest number of individuals with chronic patterns of homelessness, with 19 percent of the nation’s chronically homeless individuals, 16,016 people. New York City had the second largest number, with 4,401 individuals with chronic patterns of homelessness.
- Major city CoCs accounted for 57 percent of all individuals with chronic patterns of homelessness, smaller cities, counties and regional CoCs had 33 percent, and BoS and statewide CoCs accounted for nine percent of chronically homeless individuals.
- Major cities accounted for a larger share of the chronically homeless individual population found in places not suitable for human habitation, (60%) than of the sheltered chronic population (51%).
- Boston, MA had the lowest percentage of individuals with chronic patterns of homelessness who were unsheltered, at seven percent. Maine BoS reported no unsheltered chronically homeless individuals on the night of the count. Among smaller cities, counties, and regional CoCs, Cambridge, MA reported the lowest unsheltered rate (14%) followed closely by Grand Rapids, MI (15%).

Continuums of Care (CoC) Were Divided into Three Geographic Categories

Major city CoCs (n=48) cover the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.

Smaller city, county, and regional CoCs (n=306) are jurisdictions that are neither one of the 50 largest cities in the United States nor Balance of State and Statewide CoCs.

Balance of State (BoS) and statewide CoCs (n=40) are typically composed of multiple rural counties or represent an entire state.

Changes Over Time

- Between 2016 and 2017, the number of individuals with chronic patterns of homelessness increased both in major cities and in smaller cities, counties, and regional CoCs, while it dropped in BoS and statewide CoCs.
- Increases between 2016 and 2017 were steepest in major cities, with 9,234 more chronically homeless individuals in those CoCs (a 23% rise). Major cities experienced increases in the number of sheltered chronically homeless individuals (14% increase) and unsheltered chronically homeless individuals (27%).
- Los Angeles, CA experienced the largest increase, with 3,046 more individuals with chronic patterns of homelessness in 2017 than in 2016 – 33 percent of the total increase in the major cities CoC category. Of the 48 CoCs in the major cities category, 29 experienced increases and 19 experienced declines, signifying that these increases were not accounted for by only a few CoCs. Between 2007 and 2017, the number of people with chronic patterns of homelessness fell nationally by 27 percent. Declines occurred across CoC types, with a 14 percent decline in major cities, 39 percent decrease in smaller cities, counties and regional CoCs, and a 38 percent decline in BoS or statewide CoCs.
- While the number of unsheltered individuals with chronic patterns of homelessness in major cities in 2017 was lower than it was in 2007, it has risen steadily since 2014. Much of the variability is related to fluctuations in the number of unsheltered chronically homeless individuals in Los Angeles. Removing Los Angeles from analysis shows unsheltered chronic homelessness in major cities declining each year between 2011 and 2016, but increasing by 34 percent in the last year.

EXHIBIT 7.2: Distribution of Bed Inventory By Type, 2017

EXHIBIT 7.3: Project Types for Homeless and Formerly Homeless People

EXHIBIT 7.4: Inventory of Beds By Household Type, 2017

Beds by Household Type, 2017

- Communities were asked to identify the number of beds targeted to households with adults and children (i.e., families), households without children (i.e., adult-only households), and households with only children.
- ES beds targeted families and adult-only households in approximately equal proportions, 51 and 48 percent.
- TH beds were also evenly split, with 50 percent dedicated to families and 49 percent to adult-only households.
- RRH was initially designed to primarily serve families. In recent years, RRH has been also targeted to individuals, veterans, and youth. In 2017, nearly three-quarters of RRH beds (73%) were targeted to people in families.
- Almost two-thirds (64%) of PSH beds were targeted to adult-only households, while about two-thirds (65%) of OPH beds were targeted to families.
- Beds targeting child-only households were rarer—only 4,042 beds in total—but were most prevalent in ES projects.

On a Single Night in January 2017

- 899,059 beds available on a year-round basis were available in emergency shelters (ES), safe havens (SH), transitional housing (TH), rapid rehousing (RRH), permanent supportive housing (PSH), or other permanent housing (OPH).
- Of the 2017 Annual Homeless Assessment Report to Congress: Part 1

* Beds dedicated to youth are beds set aside by programs to serve people under the age of 25 unless there are no people under 25 present.

In the case of parenting youth, these beds include beds for their children.

There were 23,292 beds targeted to unaccompanied youth and families with youth parents (where all members are under the age of 25). Of these beds, 43 percent (or 10,077) were in TH, representing about eight percent of all TH beds.

**Beds by CoC Category, 2017**

- In major cities, 55 percent of all beds were in permanent housing (RRH, PSH, OPH), and 45 percent in shelter (ES, TH, SH). In smaller cities, counties, and regional CoCs, 59 percent of beds were in permanent housing, and permanent housing beds represented half of all beds in BoS and statewide CoCs.
- In all three categories of CoCs, PSH beds represented the majority of the inventory of permanent housing projects, but they were most prevalent in major city CoCs (75%).
- Considering the inventory for both currently and formerly experiencing homelessness, in major cities, PSH beds accounted for the largest share of the housing inventory (41%), followed by ES beds (34%). Similarly, PSH represented 40 percent of the inventory in smaller cities, counties, and regional CoCs, but ES beds comprised a smaller share of the bed inventory (26%) than the other CoC types.
- In BoS and statewide CoCs, PSH does not represent the largest share of beds. In these CoCs, ES represents 33 percent of their inventory, followed by PSH (32%). BoS and statewide CoCs have the largest share of TH beds (17%) and RRH beds (13%).

**Since 2016**

- Between 2016 and 2017, the total inventory of year-round beds for people currently or formerly experiencing homelessness increased by 31,957 beds, a five percent increase driven primarily by growth in the permanent housing inventory.
- The number of beds in shelter projects (ES, TH, and SH) declined by 11,846 beds, or three percent. The number of ES beds increased by 12,908 beds (or 5%), but the TH inventory declined by almost twice that margin, with 24,500 fewer beds (a 17% decrease). The number of SH beds also decreased by 254 beds.

- The number of beds dedicated to veteran households increased by 12,251 (10%), and the number of beds dedicated to unaccompanied youth and families with youth parents increased by 2,089 (10%).

**In the case of parenting youth, these beds include beds for their children.**
Since 2007

- There were 287,767 more beds in 2017 for people currently or formerly experiencing homelessness than there were in 2007, an increase of 47 percent.
- In 2007, there were about as many ES beds (211,451) as there were TH beds (211,205). Over time, the ES inventory increased, more resources were devoted to permanent housing, and the TH inventory declined. Between 2007 and 2017, the number of TH beds dropped by 43 percent.
- The number of PSH beds has risen each year since 2007, as communities have increasingly devoted resources to PSH. Over the ten-year period from 2007 to 2017, the PSH inventory grew by 165,164 beds in total, an increase of 88 percent.
- Much of the increase in PSH beds is for beds targeting people experiencing chronic homelessness. The number of those beds increased dramatically between 2007 and 2017; 111,198 PSH beds for chronically homeless people were added in this 10-year period, a 294 percent increase.
