

February 16, 2021

Ann E. Misback, Secretary
Board of Governors of the Federal Reserve System
20th Street and Constitution Avenue NW
Washington, DC 20551

**Re: Community Reinvestment Act Advance Notice of Proposed Rulemaking
Docket No. R-1723 and RIN 7100-AF94**

To Whom It May Concern:

On behalf of the members of the Low Income Housing Tax Credit (LIHTC) Working Group, we appreciate the opportunity to comment on the Advance Notice of Proposed Rulemaking (ANPR) regarding the Community Reinvestment Act (CRA) published by the Federal Reserve Board of Governors (Board). The members of the LIHTC Working Group are participants in the affordable housing community who work together to help resolve technical LIHTC policy issues and provide recommendations to make the LIHTC even more efficient in delivering benefits to help build and preserve affordable housing and serve low-income residents. Our group includes nonprofit and for-profit developers, syndicators, investors, lenders, lawyers and other affordable housing professionals. Moreover, we represent some banks that invest in LIHTC equity annually, for which the CRA is a crucial incentive. According to the Affordable Housing Tax Credit Coalition, the LIHTC equity market in 2019 was estimated at about \$18 billion, of which nearly three-quarters were attributed to CRA-motivated financial institutions.

Ever since the promulgation of the revised CRA regulations in 1995, the CRA has helped make the LIHTC the most successful affordable rental housing production and preservation incentive in the nation's history. The LIHTC is the most important source of capital for affordable rental housing finance, annually financing virtually all newly constructed or substantially rehabilitated affordable rental housing since its inception. Since 1987, the LIHTC has generated more than \$220 billion in equity investment, financed nearly 3.5 million affordable rental homes, and housed more than 8 million low-income households, according to data from the National

NOVOGRADAC[™]

3025 North Wooster Avenue, Dover, Ohio 44622 | P 330.365.5400 | F 330.365.5401
www.taxcredithousing.com | dirk.wallace@novoco.com

Council of State Housing Agencies (NCSHA) and analysis from the National Association of Home Builders (NAHB). It has also supported the creation of more than 3.7 million jobs, generated more than \$350 billion in wages & business income, and spurred more than \$140 billion in tax revenue.

Not only does the LIHTC have a strong record of economic impact, it also targets the lowest income household. According to HUD's December 2019 LIHTC Tenant Report, the median LIHTC household earned less than \$18,000 annually. Furthermore, 44.4% of the households earned at or below 30% of the area median income (AMI), and 62.2% earned at or below 40% AMI.

Despite this tremendous record of achievement, there are more than 10 million low-income renters nationwide that are severely cost-burdened, i.e., paying more than 50 percent of their income on rent, according to Harvard's Joint Center on Housing Studies (JCHS) State of the Nation's Housing report. While those at the bottom of the income spectrum—nearly 83 percent of renters with incomes at or below \$15,000 are severely cost burdened—fare the worst, those cost burdens are increasingly affecting middle-income renters, with a 10 percent increase in the incidence of cost burdens among renters with incomes between \$30,000 and \$45,000. Given this rental affordability crisis, and as the premier resource for affordable rental housing production, we cannot afford to reduce LIHTC investment by reducing the CRA incentive for affordable housing investment and lending.

While we believe the Board's proposed regulatory framework as outlined in the ANPR represents a clear improvement over the regulations published by the Office of the Comptroller in June 2020, we are concerned that if the ANPR is acted upon without significant changes, the LIHTC and affordable rental housing production and preservation could be harmed, and urge you to make changes to the ANPR to ensure that the CRA continues to robustly support affordable rental housing production and preservation through the LIHTC. We believe our comments and suggestions, if incorporated into your proposal, will ensure the CRA continues to support and possibly increase LIHTC investment and the affordable rental housing production and preservation it finances to address the nation's growing rental housing crisis.

In December 2020, Congress voiced its support for increased LIHTC investment by its establishment of the 4% LIHTC floor and at least \$1.25 billion in disaster LIHTC authority in the 2020 year-end tax legislation, which Novogradac conservatively estimates to increase 9% and 4% LIHTC allocations by at least \$4.6 billion beyond what was projected for 2021. As a result, Novogradac's estimate of the 2021 newly minted LIHTC allocations is at least \$26 billion. At a

median LIHTC equity price of 91 cents per LIHTC dollar, which was the approximate median LIHTC equity price in 2020,¹ that would result in \$23.7 billion of LIHTC equity in 2021, more than a 30 percent increase from 2018. If CRA regulations were to diminish the incentive for banks to invest in LIHTC equity, the efficacy of the newly authorized LIHTC to finance affordable rental housing would be significantly diminished.

Please see the following for a summary of our main CRA regulatory reform recommendations as well as responses to selected ANPR questions below.

SUMMARY OF MAIN RECOMMENDATIONS

Our main CRA regulatory reform recommendations are focused on the Community Development Test (and in particular the Community Development Financing Subtest) and on reforming assessment areas for purposes of CRA examinations, especially with regard to determining where and how equity investments are counted.

Community Development Test

The LIHTC was designed by Congress to foster long-term investments in low-income communities through the investment of equity, and it depends greatly on equity investments by banks that are driven largely by CRA requirements. Without CRA motivation, a significant amount of LIHTC investment demand would disappear.

We believe a more equitable method to measuring CRA performance should be grounded in the current “large bank” three-test evaluation regime, where the relative merits of lending, investing and services are judged on their own and not pit against each other. Retaining an Investment Test or establishing a Community Development Financing Investment Subtest in the CRA regulations would ensure that banks continue to have a focused incentive to meet the needs of LMI communities from all three critically important perspectives. Our review of the public comment letters in response to the OCC's proposed CRA regulations and its preceding ANPR do not point to criticisms of the *design* of a three-test evaluation. Rather, the issues appear to be primarily systemic in nature, including the lack of concrete definitions for key concepts in the original statute as well as the difficulty of setting objective benchmarks that could equally apply to banks with different asset levels and business models, and in diverse communities with distinct investment needs. Furthermore, we understand that banks' use of mortgage backed securities to

¹ See <https://www.novoco.com/resource-centers/affordable-housing-tax-credits/lihtc-equity-pricing-trends>

satisfy the Investment Test caused some concern and should be addressed. Such a concern about mortgage backed securities should NOT be the reason for eliminating the Investment Test in its entirety.

With respect to LIHTC investments, as noted above, eliminating the Investment Test or not establishing a Community Development Financing Investment Subtest, and evaluating all of a bank's CRA community development investments and loans in one test would enable banks to shift towards an increased (and potentially exclusive) reliance on debt products, reducing and perhaps eliminating equity investments such as those in LIHTCs. Such equity investments must be committed for an extended period of time (15 years in the case of LIHTCs), and such long-term commitments were designed to be, and surely are, more transformative for the communities that CRA is intended to support than traditional debt products, with far-ranging impacts for LMI residents as well as the surrounding neighborhoods.

Without CRA motivation, LIHTC investment would likely be substantially reduced. We encourage the Board to continue to support the CRA's current role in incentivizing these types of investments, thereby avoiding the potentially unintended consequence of incentivizing banks to limit (or eliminate) their LIHTC investments that otherwise may best meet the needs of their LMI communities.

Please see our response to Question 42 for further details on this point.

Assessment Area Reform

The ANPR suggests the need to expand CRA exams to assess bank lending in areas beyond bank branches to recognize the evolution of modern banking and the fact that many banks receive large portions of their deposits from outside their facilities-based assessment areas where their branch network has a physical presence. Furthermore, we know that banks often lend in areas outside their facilities-based assessment areas.

In addressing assessment area reform, if an institution with a traditional facility based bank branch network has demonstrated that it has been responsive to needs in its assessment area in its prior CRA examination (e.g., a "satisfactory" or greater CRA rating), we suggest such institution could receive additional credit for a proportional amount of CRA-eligible activity that's undertaken outside the bank's assessment area, but located in the same or neighboring state, and that targets particularly highly distressed areas or targeted populations (see further discussion of this below). This approach would better incentivize banks to address local needs in traditionally

underserved areas. Essentially, focusing on the demographic, economic, and financial condition of an area would be a better measure of local needs than basing the analysis merely on where a bank accepts deposits outside its facilities-based assessment areas. See below for a list of areas identified by Congress and the Administration as in need of greater investment:

1. **ECONOMICALLY DISTRESSED COMMUNITIES** - Census tracts with poverty rates greater than 30 percent; OR Census tracts with, if located within a non-Metropolitan Area, have a median family income that does not exceed 60 percent of statewide median family income, or, if located within a Metropolitan Area, have a median family income that does not exceed 60 percent of the greater of the statewide median family income or the Metropolitan Area median family income; OR Census tracts with unemployment rates at least 1.5 times the national average.
2. **NON-METROPOLITAN COUNTIES** - Qualifying census tracts that are located in counties not contained within a Metropolitan Statistical Area (MSA), as defined in OMB Bulletin No. 15-01 (Update of Statistical Area Definitions and Guidance on Their Uses) and applied to the 2010 census tracts.
3. **HOPE VI/CHOICE NEIGHBORHOODS INITIATIVE REDEVELOPMENT** - Areas encompassed by a HOPE VI or Choice Neighborhoods Initiative redevelopment plan.
4. **FEDERAL NATIVE AREAS** - Federally Designated Indian Reservations, Off Reservation Trust Lands or Alaskan Native Village Statistical Areas, or Hawaiian Home Lands.
5. **ARC/DRA AREAS** - Areas designated as distressed by the Appalachian Regional Commission or Delta Regional Authority.
6. **COLONIAS AREAS** – low-income communities on the U.S.-Mexico border as designated by the U.S. Department of Housing and Urban Development.
7. **FEDERAL/STATE/LOCAL ZONES** - Federally designated Opportunity Zones, Enterprise Zones, Promise Zones, Base Realignment and Closure areas, State Enterprise zone programs, or other similar state/local programs targeted towards particularly economically distressed communities.
8. **FEMA DISASTER AREAS** - Counties for which the Federal Emergency Management Agency (FEMA) has: issued a “major disaster declaration” and made a determination that such County is eligible for both “individual and public assistance”; provided that the initial investment will be made within 36 months of the disaster declaration.

To further the Board's stated intention to tailor the CRA rules for banks with nontraditional business models, such as wholesale and limited purpose banks and digital banks that primarily serve customers outside a traditional bank network, we also recommend an assessment area framework that reflects these banks' distinct business models and nationwide reach. With respect to wholesale and limited purpose banks, we urge the Board to retain the existing policy that allows banks with these designations to get CRA credit for any community development activities nationwide after they have adequately addressed the needs of their facilities-based assessment areas. We recommend a similar policy for digital banks, which also have a nationwide reach and operate without a network of traditional brick-and-mortar branches.

RESPONSES TO SELECT ANPR QUESTIONS

ANPR Section II. CRA Background

Question 2. In considering how the CRA's history and purpose relate to the nation's current challenges, what modifications and approaches would strengthen CRA regulatory implementation in addressing ongoing systemic inequity in credit access for minority individuals and communities?

In addition to better addressing the credit needs of minority individuals and communities, it is important to also provide these communities with better access to affordable housing. People of color are disproportionately housing cost burdened, and the COVID-19 crisis is further exacerbating this disparity. Prior to the COVID-19 crisis, black and Hispanic renters had respectively nine percent and six percent higher rates of severe housing cost burden compared to white renters.² As of early December 2020, 13 percent of all white renters were behind on rent, while 28 percent of all black renters and 24 percent of all Hispanic or Latino renters were behind.³

Federally subsidized affordable housing, including LIHTC, is an important tool to meet the affordable rental housing needs of low-income Americans, and especially people of color. People of color make up a disproportionately large share of LIHTC residents – at least 31 percent of heads of households in LIHTC properties are black and at least 17 percent are Hispanic,⁴ while respectively just 12 percent and 14 percent of all renter households are headed by people who are

⁴ U.S. Department of Housing and Urban Development, "Understanding Whom the LIHTC Serves: Data on Tenants in LIHTC Units as of December 31, 2017," (2019). Retrieved from: <https://www.huduser.gov/portal/sites/default/files/pdf/LIHTC-TenantReport-2017.pdf>

black or Hispanic.⁵ Much of this imbalance is due to persistently high rates of poverty among people of color, which have resulted in part from the practice of redlining, which the CRA was designed to counteract.

Considering the disproportionate need for affordable rental housing among people of color and the CRA's statutory purpose, we urge the Board to ensure that any changes to CRA will expand the incentive to engage in community development activities that expand or preserve the nation's supply of affordable rental housing, in which the LIHTC plays a key role.

ANPR Section III. Assessment Areas

Question 4. How should the Board provide more clarity that a small bank would not be required to expand the delineation of assessment area(s) in parts of counties where it does not have a physical presence and where it either engages in a de minimis amount of lending or there is substantial competition from other institutions, except in limited circumstances?

Establish minimum threshold requirements based on where the small bank has actually marketed and provided credit and where it could reasonably be expected to have marketed and provided credit for purposes of delineating assessment area(s) in parts of counties where it does not have a physical presence.

Question 5. Should facility-based assessment area delineation requirements be tailored based on bank size, with large banks being required to delineate facility-based assessment areas as, at least, one or more contiguous counties and smaller banks being able to delineate smaller political subdivisions, such as portions of cities or townships, as long as they consist of whole census tracts?

Yes, size should be the determining factor with large banks being required to delineate facility-based assessment areas as, at least, one or more contiguous counties that can be reduced when, based on a data-driven analysis, the area is determined to be too large to serve or is inhibited by geographic barriers. Small banks should continue to be allowed to define facility-based assessment areas that include partial counties or portions of smaller political subdivisions, including portions of cities or townships, as long as they are composed of at least whole census tracts.

⁵ Joint Center for Housing Studies of Harvard University, "The State of the Nation's Housing 2020 Appendix Data Table," (2020). Retrieved from: <https://www.jchs.harvard.edu/state-nations-housing-2020>

Question 7. Should banks have the option of delineating assessment areas around deposit taking ATMs or should this remain a requirement?

A minimum threshold should be established and remain a requirement if the bank's ATM deposits meet or exceed that threshold.

ANPR Section VII: Community Development Test: Evaluation of Community Development and Financing and Community Development Services Performance

Question 42. Should the Board combine community development loans and investments under one subtest? Would the proposed approach provide incentives for stronger and more effective community development financing?

As mentioned in our general recommendations above, the separate Investment Test under the Board's current CRA regulations has been critical in motivating banks to put in place the expertise and resources to participate in the LIHTC equity market at the volume they are currently maintaining. For that reason, we urge the Board to retain the separate Investment Test or establish a Community Development Financing Investment Subtest, which would ensure emerging banks retain the incentive to develop sophisticated community investment strategies.

Specifically, we are concerned that combining loans and investments into one test could reduce the direct incentive to make LIHTC investments. Under the proposed methodology, banks would weigh the benefits of investment against debt in determining which CRA-qualifying activities to pursue. In general, debt financing takes place over a shorter duration and is lower risk, less complex and more liquid than tax credit investments, making it a more desirable alternative. Furthermore, banks are generally required to reserve more capital for equity investment as compared to loans. Moreover, it is more expensive to originate and asset manage equity investments as compared to loans. As a result, the Board's proposed methodology is likely to initiate a substitution effect of loans over other types of CRA activities that are less impactful on capital charges. With less incentive to make LIHTC investments, affordable rental housing production and preservation could ultimately decrease.

If a separate Investment Test is not retained or a Community Development Investment Subtest not established, strong parameters should be put in place to counteract the potential negative impact on LIHTC investment volume. We suggest the following strategies, which could be used individually or together:

- Separately track community development equity investments from community development loans. The Board, using historic CRA performance data across all institutions, could establish a benchmark level of investment activity (as a percentage of a bank's total community development activity) that would be taken into consideration during the performance context review. For example, a bank which devotes a larger portion of its community development activity toward investments than its peer institutions could be eligible for an increase in its overall Community Development Financing Subtest score, particularly if the bank is between two possible ratings. Alternatively, a high investment benchmark could be considered as a factor for an outstanding rating. To the extent possible, the potential effect of the investment benchmark on the bank's rating should be quantifiable and predetermined.
- Review a bank's institutional investment track record against its assessment period performance. If a bank's volume of CRA eligible investments, particularly LIHTC investments, have declined significantly from one period to the next (taking into account cyclical patterns and the safety and soundness of the institution), then an examiner should be able to request an explanation for the variance. Explanations could include safety and soundness, Part 24 or other regulatory constraints, or lack of available investments. Reviewing banks' institutional investment track record against assessment period performance would ensure that changes to CRA regulations do not have the unintended consequence of decreasing community development investment, particularly LIHTC investment, especially in the early years of newly implemented regulations.
- Clarify that LIHTC investments will receive the highest possible impact scores under the performance context review. As discussed in response to Question 47, the three-point scale may not be nuanced enough to adequately differentiate and reward the most impactful community development activities. We suggest expanding this scale (e.g., to five points), and providing a unique assignment at the top of the scale for investment activities, particularly LIHTC investments. In our response to Question 46, we also suggest further integrating impact scores into the community development evaluation.

In short, in the absence of a separate Investment Test or Community Development Financing Investment Subtest, we believe it will be critical to provide special treatment for investments in general, and specifically for LIHTC investments. In addition to our recommendations above, we

strongly suggest that any final CRA regulations are first closely analyzed to ensure they will not have a negative impact on LIHTC investment.

Question 45. Should the Board use local and national benchmarks in evaluating large bank community development financing performance to account for differences in community development needs and opportunities across assessment areas and over time?

We appreciate that benchmarks could provide some additional context for evaluators analyzing community development efforts. However, without correcting for CRA “hot-spots” and “deserts,” it stands to reason that local benchmarks could have the effect of exacerbating current distortions in the market, depending on how benchmarks are utilized – an assessment area already receiving a relatively high level of community development activities against deposits would have a high benchmark, motivating banks to focus on that area to meet the benchmark, and an assessment area receiving a low level of community development activities against deposits would have a low benchmark, allowing minimal investment or lending to meet the standard. As is already explained in the ANPR, they “could result in performance standards that are very low in some assessment areas and very high in others,” rendering the benchmarks less meaningful.

We suggest first utilizing local benchmarks to help address CRA hot-spots and deserts, incentivizing banks to increase activities in underserved communities, and then to institute national and regional benchmarks. Regional benchmarks may be necessary if the two national metrics (metro and non-metro) do not capture enough nuance to be used as a meaningful comparator for the majority of communities.

To address CRA hot-spots and deserts, we suggest allowing banks with traditional facility based bank branch networks to receive credit, at the assessment area level, for LIHTC investments made anywhere within a state in which a bank has one or more assessment areas, especially for underserved areas of such a state. While we appreciate that the ANPR proposes that a bank will receive credit at the state level for any community development loans or investments in the state, we believe that it would provide more certainty to a bank if it were clear that such investments would be treated as serving the assessment area(s) in that state. If a bank has more than one assessment area within the state or multi-state metropolitan statistical area, the credit could be allocated evenly to each assessment area. This treatment would ensure underserved communities not within local assessment areas are still able to benefit from the incentive that the CRA provides,

more evenly distributing LIHTC investments geographically and helping to limit CRA pricing distortions.

Question 46. How should thresholds for the community development financing metric be calibrated to local conditions? What additional analysis should the Board conduct to set thresholds for the community development financing metric using the local and national benchmarks? How should those thresholds be used in determining conclusions for the Community Development Financing Subtest?

In light of initial data limitations, it would be prudent to initially treat the thresholds as a general guideline to help evaluate a bank's community development investment metric rather than creating a presumption of "satisfactory." This approach would provide banks with more certainty regarding performance expectations relative to the current approach, which does not have any consistent quantitative thresholds. Additional analysis should be conducted that includes information on community development investment activities conducted statewide to supplement information provided by the bank at the time of an examination, including the amount of investments, the location or areas benefited by these activities and information describing the community development purpose.

Question 47. Should the Board use impact scores for qualitative considerations in the Community Development Financing Subtest? What supplementary metrics would help examiners evaluate the impact and responsiveness of community development financing activities?

We support the Board's decision to avoid using multipliers in the community development evaluation methodology, as they could lead to a bank decreasing its overall investment activity. We also support the Board's proposal to include supplementary metrics to detail banks' investment, loans, and contributions, which would provide additional transparency. As we explain in our response to Question 42, mitigating features should also be established to prevent a substitution effect of loans over investment, should the separate investment test be eliminated.

We support the use of Impact Scores to incentivize high-impact activities but are concerned that a three-point scale may not provide enough gradations to adequately capture differences in impact and community responsiveness. We suggest a gradation of five points where the highest scores are reserved for investments, and the top score is reserved for only the highest-impact investments, necessarily including LIHTC investments. To provide additional clarity for banks, the Board should develop a list of pre-approved activities and their corresponding impact scores.

We also request additional information regarding how impact scores would be used. It appears from the ANPR that the primary purpose would be determining the assessment area rating for the Community Development Test when two ratings are possible. We believe the scores should be more deeply integrated into the primary evaluation, to better incentivize responsive and impactful activities. For example, the Board could develop a high-impact community development benchmark at the state or institution level that would incentivize banks to demonstrate that a certain percentage of its community development activities are scored at the highest level of impact. Incentives could equate to additional points or tie to the achievement of an outstanding rating at either the state or institution level.

Impact scores and supplementary metrics will help quantify the otherwise subjective notion of "impact." While we agree that subjective evaluation is important to fully discern a bank's responsiveness to communities, the efficacy of any subjective, qualitative rating determined by evaluators will hinge on the evaluators' understanding of community development financing. Community development is complex, and we appreciate the Board's effort to provide evaluators with additional information about a bank's activities and local and national conditions. However, we urge the Board to also consider what training may be necessary to ensure evaluators have the requisite background to make appropriate subjective evaluations regarding community development activities and impact.

ANPR Section VIII. Community Development Test Qualifying Activities and Geographies

Question 52. Should the Board include for CRA consideration subsidized affordable housing, unsubsidized affordable housing, and housing with explicit pledges or other mechanisms to retain affordability in the definition of affordable housing? How should unsubsidized affordable housing be defined?

We appreciate the Board's goal to ensure strong incentives for banks to provide community development loans and investments for the creation and preservation of affordable housing, and we support the definition of subsidized affordable housing included within the ANPR.

We believe the definition of unsubsidized affordable rental housing should include parameters to help ensure that it serves LMI individuals. In agreement with the National Association of Affordable Housing Lenders, rental housing not subject to tenant income restrictions should be considered as affordable housing if most of the property's rents are affordable when the financing is committed and the property meets *one* of the following three additional standards:

1. The property is located in a LMI neighborhood (i.e., census tract),
2. Most renters in the neighborhood are LMI and most rents in the neighborhood are affordable to renters earning at or below 80% AMI, or
3. The owner agrees to maintain affordability to LMI renters for the life of the financing.⁶

Question 54. Should the Board specify certain activities that could be viewed as particularly responsive to affordable housing needs? If so, which activities?

We support specifying certain activities as particularly responsive to affordable housing needs in order to provide added clarity and certainty for banks, and strongly urge that the LIHTC be included. The LIHTC has a long and tested track record, having financed nearly 3.5 million affordable homes since it was established in 1986. LIHTCs are a limited resource allocated competitively based on state-specific affordable housing needs, meaning only the proposals deemed to be most impactful and aligned with state-set affordable housing goals are awarded LIHTCs.

The evidence that the LIHTC serves the most underinvested communities is clear. In some of the most underserved rural areas, the LIHTC provides a disproportionately high percentage of the multifamily rental housing stock. For example, in rural regions of Persistent Poverty Counties⁷ and the Lower Mississippi Delta,⁸ the LIHTC provides 40 percent and 39 percent of all multifamily rental housing, respectively – an amount over three times higher than the national average and one and a half times higher than the average in other rural areas. For these reasons, we argue that the LIHTC is particularly responsive to affordable housing needs.

We agree that housing for very low-income, homeless and other harder to serve populations should also be considered particularly responsive, considering the need for properties serving the aforementioned groups and the added incentive necessary to bring them to fruition due to the high cost of development and operations. We suggest “harder to serve” populations include

⁶ For more information, see the full proposal from the National Association of Affordable Housing Lenders here: <http://naahl.org/wp-content/uploads/2017/12/Unsubsidized-affordable-rental-housing-under-CRA-v3.pdf>

⁷ PPCs are counties for which decennial census data shows poverty rates of at least 20 percent since 1990. The study found that, in rural regions of PPCs, the LIHTC provides 40 percent of all multifamily rental housing - an amount three times higher than the national average and one and a half times higher than the average in other rural areas. Sourced from: Freddie Mac, “Spotlight on Underserved Markets: LIHTC in Rural Persistent Poverty Counties,” (2020). Retrieved from: https://mf.freddiemac.com/docs/lihtc_persistent_poverty_counties.pdf?qa=2.144102133.1178134337.1608330267-1072611062.1607617388

⁸ Freddie Mac, “Spotlight on Underserved Markets: LIHTC in Rural Lower Mississippi Delta,” (2019). Retrieved from: https://mf.freddiemac.com/docs/lihtc_in_lower_mississippi_delta.pdf

veterans, people with disabilities, and seniors. We also suggest considering a geographic scope for particularly responsive affordable housing, which could focus on high-opportunity, rural, and tribal areas, again due to the increased cost or difficulty in providing affordable housing in these areas.

Question 55. Should the Board change how it currently provides pro rata consideration for unsubsidized and subsidized affordable housing? Should standards be different for subsidized versus unsubsidized affordable housing?

We suggest allowing full credit for any property in which 20 percent of units are set aside for low-income households at or below 60 percent of area median income if the property also receives funding from a federal, state, or local government affordable housing policy or program. For unsubsidized affordable rental housing, we suggest pro-rata credit for properties in which 20 to 50 percent of units are affordable to low-income households, and full credit for properties in which over 50 percent of homes are affordable to low-income households.

Question 68. Will the approach of considering activities in “eligible states and territories” and “eligible regions” provide greater certainty and clarity regarding the consideration of activities outside of assessment areas, while maintaining an emphasis on activities within assessment areas via the community development financing metric?

We recommend that, in the next stage of rulemaking, the Board provide additional guidance on methodologies for providing banks credit for investing in LIHTC funds in which only a portion of the activities will necessarily lie within the banks' designated assessment areas (e.g., multi-state, regional or national funds).

Question 69. Should the Board expand the geographic areas for community development activities to include designated areas of need? Should activities within designated areas of need that are also in a bank's assessment area(s) or eligible states and territories be considered particularly responsive?

Yes, the Board should expand the geographic areas for community development activities to include designated areas of need. We particularly support including rural areas, tribal areas, and areas where the local benchmark for the community development financing metric is below an established threshold, and suggest that two additions be made: distressed and underserved nonmetropolitan middle-income geographies, and Presidentially Declared Disaster Areas.

We also recommend that the designated areas of need retain their designation long enough to plan for multi-year projects. For example, any designated areas of need identified at the start of a bank's assessment period should receive credit even if the designation has changed by the end of the assessment period. The bank should also receive credit in any new designated areas of need that may be determined during its assessment period.

Question 71. Would an illustrative, but non-exhaustive, list of CRA eligible activities provide greater clarity on activities that count for CRA purposes? How should such a list be developed and published, and how frequently should it be amended?

We support the development of an illustrative, non-exhaustive list of activities that meet the requirements for CRA in an effort to provide banks with as much clarity and certainty as possible. Such a list should initially be developed through publication in the Federal Register to solicit public comment and feedback and thereafter be updated following this process once every three months utilizing the Federal Reserve's Investment Connection platform. Banks should also have the ability to request additional guidance on transactions which may not fit cleanly within the definition of an eligible activity. We urge the LIHTC be included on the list of eligible activities considering its demonstrated ability to further the goals of CRA.

Question 72. Should a pre-approval process for community development activities focus on specific proposed transactions, or on more general categories of eligible activities? If more specific, what information should be provided about the transactions?

A pre-approval process should be adopted for community development activities focused on specific proposed transactions that fall outside of the proposed non-exhaustive list of eligible activities or activities that have otherwise been undertaken in the past for which there should be conditional approval. To ensure large, catalytic impact projects are not delayed due to a pre-approval process, we recommend requested information be reviewed within a 30-60-day timeframe for rendering such decisions.

Question 78. Would eliminating limited-scope assessment area examinations and using the assessment area weighted average approach provide greater transparency and give a more complete evaluation of a bank's CRA performance?

While the weighted average approach may provide greater transparency, it would not necessarily provide a more complete evaluation of a bank's CRA performance because of its focus on dollar

amounts of deposits in a given geography. When the CRA was enacted in 1977, banks received deposits and made loans primarily through geographical branches. Today, deposits are much more fluid and can turnover on a seasonal basis in large volumes. It would be challenging and costly trying to keep track of deposits attributable to any given area outside a bank's branch-based assessment areas for the purposes of determining an appropriate weighted average. Alternatively, an approach that looks at the ratio of deposits to loans in any given assessment area would help to ensure that ratings accurately reflect performance in all markets, including those where lending volume is low relative to deposits. This approach would give full consideration to performance in each assessment area, proportional to a bank's lending level and capacity to lend.

Question 79. For a bank with multiple assessment areas in a state or multistate MSA, should the Board limit how high a rating can be for the state or multistate MSA if there is a pattern of persistently weaker performance in multiple assessment areas?

Yes, for a bank with multiple assessment areas in a state or multistate MSA, the Board should limit how high a rating can be for the state or multistate MSA if there is a pattern of persistently weaker performance in multiple assessment areas.

ANPR Section X: Ratings

Question 81. Should large bank ratings be simplified by eliminating the distinction between "high" and "low" satisfactory ratings in favor of a single "satisfactory" rating for all banks?

No, rigorous CRA reform should reveal more distinctions in performance, not less, so large bank ratings should not be simplified by eliminating the distinction between "high" and "low" satisfactory ratings in favor of a single "satisfactory" rating for all banks.

Question 82. Does the use of a standardized approach, such as the weighted average approach and matrices presented above, increase transparency in developing the Retail and Community Development Test assessment area conclusions? Should examiners have discretion to adjust the weighting of the Retail and Community Development subtests in deriving assessment area conclusions?

Per our response to Question 78, while the weighted average approach may provide greater transparency, it would not necessarily provide a more complete evaluation of a bank's CRA performance. For that reason alone, examiners should have discretion to adjust the weighting of the Retail and Community Development subtests in deriving assessment area conclusions.

Question 84. Should the adjusted score approach be used to incorporate out-of-assessment area community development activities into state and institution ratings? What other options should the Board consider?

Yes, the adjusted score approach should be used to incorporate out-of-assessment area community development activities into state and institution ratings.

Question 85. Would the use of either the statewide community development financing metric or an impact score provide more transparency in the evaluation of activities outside of assessment areas? What options should the Board consider to consistently weight outside assessment area activities when deriving overall state or institution ratings for the Community Development Test?

The use of the statewide community development financing metric rather than an impact score would provide more transparency in the evaluation of activities outside of assessment areas.

Question 88. Should consideration for an outstanding rating prompted by an investment or other activity in MDIs, women-owned financial institutions, and low-income credit unions be contingent upon the bank at least falling within the “satisfactory” range of performance?

Yes, consideration for an outstanding rating prompted by an investment or other activity in MDIs, women-owned financial institutions, and low-income credit unions should be contingent upon the bank at least falling within the “satisfactory” range of performance.

Question 89. Would it be helpful to provide greater detail on the types and level of activities with MDIs, women-owned financial institutions, and low-income credit unions necessary to elevate a “satisfactory” rating to “outstanding”?

Yes, per our response to Question 71, a list should initially be developed through publication in the Federal Register to solicit public comment and feedback on the types and level of activities with MDIs, women-owned financial institutions, and low-income credit unions necessary to elevate a “satisfactory” rating to “outstanding”.

CONCLUSION

The CRA has been a crucial incentive for banks to invest in LIHTC equity and affordable rental housing production and preservation since 1995, and with an appropriate revised regulatory framework, will continue to be an essential incentive to help address the nation's affordable rental

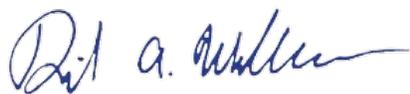

housing crisis, one that pre-dated the pandemic and has been exacerbated by it. We urge the Board to carefully consider the impact of any CRA regulatory reform that may limit or harm the incentive to invest in LIHTC and affordable rental housing.

Finally, we urge all three banking agencies – the OCC, FDIC and the Board – to develop a final CRA rule that is issued on an interagency basis. This rule should not be finalized without interagency coordination. Some member banks have multiple charters and are examined by both the FDIC and the Board. Having two different methods of evaluation would create significant regulatory burden on these banks and result in confusion for community groups attempting to develop community projects using two different CRA qualification definitions, as well as reviewing Performance Evaluations.

We hope that you find these comments, considerations and recommendations helpful as you update the CRA regulations. Thank you in advance for your time and consideration. Please do not hesitate to contact us if you have any questions regarding our comments or if we can be of further assistance.

Yours very truly,

Novogradac and Company LLP
