Hearing on FY 2004 Appropriations

U.S. House of Representatives
Subcommittee on VA, HUD, and Independent Agencies

Written Statement

Tony T. Brown, Director

DEPARTMENT OF THE TREASURY
Community Development Financial Institutions Fund

February 27, 2003

INTRODUCTION

Chairman Walsh, Congressman Mollohan and Members of the Subcommittee, I appreciate the opportunity to testify before you today on behalf of the Department of Treasury’s Community Development Financial Institutions (CDFI) Fund and in support of the President’s FY 2004 budget. Last year was my first visit before this honorable body.

I am Tony Brown, Director of the CDFI Fund. The Secretary of the Treasury selected me to serve in this post in August 2001. I bring a 20-year prior experience in banking and a personal passion for community development finance. Joining me today are my Deputy Director for Policy and Programs (Fred Cooper) and Deputy Director for Management/Chief Financial Officer (Owen Jones).

I characterize my visit before you today as filled with a great sense of accomplishment and enthusiasm for the potential of the CDFI Fund. Our goal is to help make America a place where all of its people, including those in economically distressed communities, can realize the American dream through better access to credit, capital and financial services. FY 2003 has been a transition year where the Fund has shifted from primarily a grants-making organization to one aimed at measurably improving the economic conditions of the residents of low-income communities by spurring economic growth and jobs through community development finance.

The CDFI Fund aims to do this primarily through the New Markets Tax Credit (NMTC) Program, the Community Development Financial Institutions (CDFI) Program, the Bank Enterprise Award (BEA) Program, and the Native American CDFI Development (NACD) Program.
My testimony today will focus on three key areas: the President’s FY 2004 budget proposal; the CDFI Fund’s management and operations in FY 2003; and some background on the CDFI Fund programs.

**PRESIDENT’S FY 2004 BUDGET**

The President’s FY 2004 budget requests a $51 million appropriation for the CDFI Fund. The proposed budget supports the administration of the NMTC Program, the CDFI Program, the NACD Program, and the BEA Program. Because the NMTC Program involves an allocation of tax credits rather than program funds, all costs associated with the development, implementation and monitoring of the NMTC Program are administrative. The Administration’s request reflects the following factors:

First, the NMTC Program is aimed at achieving similar economic development objectives as the CDFI and BEA Programs.

Second, the NMTC Program is vastly larger in scope than the other CDFI Fund programs. The first year NMTC Program allocation authority of $2.5 billion is some 50 times larger than the entire CDFI Fund request.

Third, the Administration currently is evaluating the BEA Program and how it might be made more efficient and effective. In this process, the CDFI Fund is considering possible legislative changes and, in the near future, I expect that we will consult with Congress regarding legislative options that would clearly distinguish the program from the mandates of the Community Reinvestment Act and ensure that awardees use BEA Program awards for community development activities. In FY 2002 - 2003, the CDFI Fund’s own internal evaluation of the BEA Program concluded that the program needed to be re-formed so that awards would be better targeted to wealth-building activities and outcome-based performance goals to better track the program’s impact would be adopted.

Fourth, this proposed FY 2004 funding level, reflecting a division of resources, is adequate to continue an effective baseline funding level in each program, particularly in light of the reforms put in place in recent months. The recent reforms reflect the organizational maturity of the CDFI Fund and the CDFI industry so that a better, more targeted effort is now possible, focusing on opportunities where real needs can be addressed through sustainable economic development.

The proposed FY 2004 budget includes increased funding for administrative expenses to $13 million to support staffing requirements of the NMTC Program and technology requirements to enhance our support for E-grants and E-government. The E-grant and E-government activities support a “green rating” received from OMB on the Presidential Management Agenda Scorecard.
MANAGEMENT AND OPERATIONS

Internal Financial and Management Controls. The CDFI Fund has implemented effective financial and management controls, as verified by its independent auditors (KPMG, LLP). These controls have allowed the CDFI Fund to receive an unqualified (clean) audit opinion. Additionally, this marks the fifth consecutive year that the independent auditors have identified no material weaknesses or reportable conditions. KPMG’s opinion affirms that the CDFI Fund’s Statements of Financial Position, Operations, and Changes in Net Position and Cash Flow are fairly presented. These findings reflect the commitment of the CDFI Fund to sustain and improve its internal controls, operating policy and procedures, and awards management.

The CDFI Fund continues to comply with the Federal Managers’ Financial Integrity Act (FMFIA) and the Federal Financial Management Improvement Act (FFMIA). The CDFI Fund’s internal management systems, accounting and administrative controls are operating effectively.

Administrative Processes. During my tenure as Director, I have spent a significant amount of time reviewing the CDFI Fund’s internal operations. We have made successful changes that have streamlined our awards process. In FY 2002, we successfully reduced the amount of time required for our award processes. In a September 2002 OIG audit report titled “CDFI Fund Post-Award Administration Process,” the OIG concluded “that the CDFI Fund’s post-award administration process is effective in ensuring that CDFI award recipients are carrying out their activities in accordance with their assistance agreements.” The report further states, “[T]he Fund has taken steps to reduce the length of time that it takes to disburse funds. These steps include Program and Compliance staff performing a compliance and matching funds analysis, implementation of the Reports Monitoring Database, and revising how it processes assistance agreements.”

Integration of New Programs. We successfully integrated the NMTC Program within our existing operations without increasing the number of new employees above FY 2001 levels. One of the most significant E-government initiatives undertaken by the CDFI Fund in FY 2002-03 was the implementation of electronic applications for the NMTC Program, facilitating ease of the application scoring process and metrics for various management reports by having captured data readily available for analysis and reporting. This was an overwhelming success and the CDFI Fund is moving forward to introduce electronic applications for each of its financial assistance programs in FY 2003.

Compliance and Portfolio Monitoring. In FY 2004 and beyond, we will continue to enhance the CDFI Fund’s research capacity, implementing market and portfolio analyses to measure the availability of financial services in underserved markets and to critique the financial and program performance of existing CDFIs. The CDFI Fund has an investment portfolio of over 600 awards, totaling over $500 million currently under compliance review.
Measuring Investment Impact. The CDFI Fund places a high priority on measuring impact and is in the forefront of improving performance reporting within the CDFI industry. The CDFI Fund is building on its experience with the CDFI Data Project, an initiative undertaken by the CDFI Fund and CDFI industry representatives, to develop a more sophisticated data collection system for CDFIs and CDEs that will allow for the collection of transaction-level data to provide the specific location and characteristics of each loan in a CDFI/CDE’s portfolio, thus allowing the CDFI Fund to measure impact at the census tract level. The CDFI Fund plans to use this data to compare CDFI/CDEs’ lending behavior and community development impact to that of traditional financial institutions and thus demonstrate that CDFI/CDEs lend in areas where traditional banks have less of a presence.

You will notice a significant difference in the format of the FY 2004 budget submission. In the past, the CDFI Fund reported nearly 20 measures, mostly measuring activity outputs. The introduction of our FY 2004 budget complies with the President’s mandate for integrated budget performance measures. The CDFI Fund received a “green rating” from the Office of Management and Budget in its latest scorecard reporting for this Presidential Management Agenda initiative.

The stated objectives of the CDFI Fund have been simplified to three key statements: (i) increase financing to businesses (including non-profit businesses) and individuals that have low wealth, have limited collateral, are located in underserved communities, or have other characteristics that inhibit them from obtaining financing from traditional financial sources, but who present good opportunities for assistance promoting sustainable economic development in the community; (ii) expand the supply and quality of housing units in underserved communities and increase homeownership in these markets by increasing the availability of housing financing that leverages conforming mortgages or non-traditional sources of housing finance; and (iii) expand access to affordable financial services for the “unbanked,” low-income people and others in underserved communities.

New baseline performance measures have been established and set into motion this year, through the CDFI Fund’s FY 2003 programs, and include better tools for tracking investment results and the use of the CDFI Fund’s awards. We will continue the process of improving the Fund’s programs by evaluating for measurable results, targeting resources through sustainable financial institutions, with an emphasis on supporting financial services that impact our nation’s most distressed areas.

Interagency Cooperation. The CDFI Fund’s Community Development Advisory Board likewise is very interested in measuring impact. At the most recent Advisory Board meeting, the federal agency representatives (HUD, USDA, SBA, Commerce, and Interior) agreed to work with the CDFI Fund to try to develop common performance measures for federal community development finance programs. Such an interagency collaborative could lead to a consolidated report on the impact of federal government expenditures in distressed communities across the country.
The CDFI Fund has worked very closely with the Internal Revenue Service to develop the guidance and regulations necessary to implement the NMTC Program; engaged in extensive discussions with the SBA on how to best match the NMTC Program requirements with the SBA’s New Markets Venture Capital Program; and conducted numerous meetings with the GAO to determine appropriate compliance and performance measurement requirements for NMTC Program allocatees.

**Investment Underwriting.** The CDFI Fund will use the new data collection system to implement PLUM, a new CDFI performance rating system. PLUM stands for Performance/community development impact; Liquidity and overall financial condition; Underwriting/portfolio quality; and Management capacity. Based on these four broad components, the CDFI Fund will use PLUM to rate each certified CDFI’s financial strength and level of community development impact. The CDFI Fund’s plan is to use this rating system to better manage its investment portfolio by creating a compliance “watch list” of under-performing entities, and to identify and promote best practices in the industry. Eventually, we plan to incorporate PLUM in the Fund’s award underwriting process.

**E-Gov Enhancements.** The CDFI Fund will soon announce a new electronic web-based customer relationship tool called “myCDFI.” This new tool will assist interested parties with a variety of services from a single location. The initial services to be offered through myCDFI include: access to all program electronic applications; access to historical electronic applications (read-only mode); self service address and organizational information updates; ability to create and maintain additional user accounts with various access levels; ability to access target service area information created while using the CDFI Fund Help Desk (including Hot Zones); and access to a message box for communication with CDFI Fund staff. Additional features will be added in the near future, including the ability to submit electronically reports required by the CDFI Fund per award agreement terms.

**CDFI FUND PROGRAMS OVERVIEW**

The strategic goal of the CDFI Fund is to improve the conditions of economically distressed communities by enhancing greater access to capital and other financial services through CDFIs (which generally are small business and housing loan funds, as well as regulated, community-oriented depository institutions), CDEs (which include for-profit and nonprofit corporations and partnerships), and insured depository institutions (banks, thrifts and credit unions).

The approach for investing in CDFIs includes three major strategies:

1) focusing CDFI Program awards on the nation’s most economically distressed areas;
2) establishing a “growth continuum” strategy in award decisions, through which awards are provided to support CDFIs to the point where they can be self-sustaining, thus permitting the CDFI Fund to provide assistance to CDFIs with unmet capital needs in other distressed communities; and

3) taking actions to obtain the information necessary to measure and report on the impact of the CDFI Fund’s programs.

**Targeting CDFI Fund Resources:** The authorizing statute allows the CDFI Fund to provide incentives for the purposes of facilitating increased lending and provision of financial and other services in economically distressed communities. The economic distress definitions vary among the Fund’s programs.

The CDFI Fund views its partnership with CDFIs, CDEs, and insured depository institutions as a catalyst for vigorous community and economic development financing activity. In FY 2003, the CDFI Fund introduced “Hot Zones” to the CDFI Program to help prioritize and direct the CDFI Fund’s limited investments. By managing CDFI Fund resources to entities that serve Hot Zones, our dollars will be prioritized for investments into areas with the greatest needs and among CDFIs that can produce strong measurable impact.

**Targeting Resources Geographically**

Hot Zones are a subset of CDFI Program Investment Areas designated by the CDFI Fund as having greater economic distress and community development needs. They are the “most distressed” of the nation’s distressed markets. Hot Zones have been identified based on census data and include, among other factors, areas with a poverty rate of at least 20 percent, income levels at or below 80 percent of the area median income, unemployment rates that are at least 1.5 times the national average, and housing costs that exceed 30 percent of the gross monthly income of a low-income household.

States that have the highest percentage of non-metropolitan Hot Zones – such as Mississippi, Kentucky, Montana, and Arizona – also have significant non-metropolitan persistent poverty populations (see Figures 1 and 2, below).

Figure 1.
In the FY 2003 round of the Financial Assistance Component of the CDFI Program, the CDFI Fund will target its resources to CDFIs that will use the award proceeds to serve Hot Zones and/or achieve the programmatic priorities of increased homeownership opportunities that are affordable to low-income households and homeownership opportunities for other targeted populations lacking access to loans, investments and financial services.

In its evaluation of applications, the CDFI Fund will give the most points to those applicants that show that at least 75 percent of their activities will be directed toward Hot Zones. Applicants that are not principally serving Hot Zones may be scored to receive the most evaluation points if they demonstrate an effective track record and plan for promoting homeownership opportunities among low-income, very-low income and other targeted populations.

Eligible geographic areas under the BEA Program are called Distressed Communities and include communities that meet certain criteria of economic distress, including Indian Reservations. Specifically, a Distressed Community must have (1) a poverty rate of at least 30 percent, provided no individual census tracts has a poverty rate of less than 20 percent (according to the most recent census); and (2) an unemployment rate that is at least 1.5 times the national average (according to the most recent Bureau of Labor Statistics data1).

---

1 Census tracts meeting these distress criteria are some of the most distressed in the nation. Using 2000 Census and BLS data, there are some 2,326 census tracts that qualify for the BEA Program. These tracts
The NMTC Program requires that substantially all of the investments made by a CDE using NMTC-related investment proceeds be invested in low-income communities, geographic areas meeting certain economic distress criteria. Investments must be made in census tracts where the area median income is 80 percent or less than the statewide area median income (or, in the case of metropolitan areas, metropolitan area median family income, if greater), or where the poverty rate is 20 percent or greater. Applicants to the first round of the NMTC Program were reviewed on a competitive basis. Applicants that indicated that they intend to target their activities to communities with higher levels of economic distress than required by statute generally scored more favorably.

**Certified CDFIs and CDEs.** CDFIs are building a financial services network that is focused on our most economically deprived communities and citizenry. CDFI Fund estimates show that certified CDFIs’ Target Markets cover 100 percent of non-metropolitan Hot Zones and 77 percent of metropolitan Hot Zones. There is at least one CDFI headquartered in each state, the District of Columbia, Puerto Rico and the U.S. Virgin Islands.

CDFIs are specialized financial institutions that operate in markets, increasingly in partnership with traditional lenders. The organizations we support are often able to lend in ways that are more flexible or not available to traditionally regulated financial institutions. As of February 1, 2003, we have certified 633 financial institutions as CDFIs:

Through the NMTC Program, the CDFI Fund designates entities as community development entities (CDEs). To qualify for CDE designation by the CDFI Fund, an entity must be a domestic corporation or partnership that: (1) has the primary mission of serving, or providing investment capital for low-income communities or low-income persons; and (2) maintains accountability to residents of low-income communities.

---

2 Please note that CDFI Target Markets were originally geocoded using 1990 Census tracts and county boundaries and that CDFI Target Markets are subject to change due to post-award amendments. Consequently, the total estimates are subject to adjustment, due both to changes in tract and county boundaries between the 1990 and 2000 Census (which the CDFI Fund’s Hot Zones are based on) and to amendments to individual CDFI Target Markets.
through representation on a governing or an advisory board. Entities may apply to become CDEs even if they do not plan to seek a NMTC allocation. Such entities presumably have a strategy of selling loans to a CDE with an allocation, or seeking an investment or loan from a CDE with an allocation. As of February 11, 2003, the CDFI Fund has certified 821 organizations as CDEs.

**New Markets Tax Credit (NMTC) Program Overview.** The intent of the Community Renewal Tax Relief Act of 2000 is to attract private sector investment in businesses located in low-income communities. Through the NMTC Program, taxpayers will be provided a credit against Federal income taxes for qualified equity investments made to acquire stock or other equity interests in designated community development entities (CDEs). In turn, substantially all of the proceeds of qualified equity investments must be used by the CDE to make qualified investments in low-income communities. These qualified low-income community investments include loans to or equity investments in, businesses or CDEs operating in low-income communities.

The NMTC Program creates a capitalization mechanism that many of the larger, more established CDFIs can advantage. In addition, other non-CDFIs may participate as well – thereby widening the pool of entities and capital sources involved in building the economies of our low-income communities. In this regard, the NMTC Program helps to supplement the CDFI Program; however, the NMTC Program is limited to areas that qualify as low-income communities and, to attract investors, the underlying business activity of the CDE must be able to deliver a return on investor’s capital at risk. Those CDFI activities that are outside of the NMTC Program’s eligible low-income communities and are of such risk that investment motivated capital is inappropriate, will not be able to generally benefit from the NMTC Program.

By offering a tax credit, the NMTC Program encourages private investment in low-income communities. If investors embrace the program, it will be a significant source of new capital that could help to stimulate new industries and entrepreneurs, diversify the local economy, and generate new jobs in low-income communities.

The tax credit provided to the investor will cover a seven-year period. In each of the first three years, the investor will receive a credit totaling 5 percent of the total value of the stock or equity interest at the time of purchase. For the final four years, the value of the credit is 6 percent annually.
The $15 billion of equity investments for which tax credits can be claimed through the NMTC Program may be allocated between 2001-2007. Because the CDFI Fund was launching the program in 2001, the first two years’ allocations were combined, and $2.5 billion was available for allocation in the just completed first round.

In FY 2003, the CDFI Fund evaluated 345 applications to the NMTC Program; these applications together requested the authority to issue $25.8 billion in equity for which NMTCs may be claimed. In March 2003, the Treasury Department, through the CDFI Fund, will announce the allocation of NMTC authority to certain community development entities (CDEs), thus supporting $2.5 billion in private sector equity investments that will result in economic stimulus in low-income communities throughout the country.

To achieve the Administration’s goals of demonstrably improving the life of residents in impacted low-income communities, Treasury attempted to set a high bar for applicants and strove to make the selections based on a rigorous merit-based selection process. This review was conducted in the following manner:

**Step One:**
- All policy decisions regarding the selection process were made by officials separate and apart from those who reviewed and rated applications. No identifying information for any application was provided to policy officials until after the selection process was concluded.

- In scoring each application, the reviewers rated each of four evaluation sections: Business Strategy, Capitalization Strategy, Management Capacity and Community Impact, awarding up to 25 points per section. In addition, reviewers rated applicants with respect to two statutory priorities: (i) up to 5 points for a track record of serving disadvantaged businesses or communities, and (ii) 5 points for committing to invest substantially all of the proceeds from its qualified equity investments in unrelated entities.

- For consistency, the process required three reviewers to independently review and evaluate each application. The reviewers included CDFI Fund staff, other federal agency staff working in other community development finance programs, and independent private sector members of the community development finance community.

- In addition to evaluating and scoring each application, reviewers recommended an allocation amount that was supported by the information in the application.

**Step Two:**
- Advancing applications were deemed to be those with an aggregate base score (without including priority points) that was in the “good” range based on a scoring scale of weak, limited, average, good and excellent. In addition, each advancing
application had to achieve an aggregate base score in the “good” range in each of the
four application evaluation criteria.

- For each application, panelists reviewed the scores, comments and recommended
  allocation amounts provided by each of the first phase reviewers. A statistical review
  was conducted to identify anomalous scores. In cases where there was an anomalous
  first phase reviewer score, the comments and recommendations of a fourth
  independent reviewer were used to determine whether the anomalous score should be
  replaced.

- The review panel also reviewed a variety of compliance, eligibility, due diligence and
  regulatory matters. Included in this review were (i) checks to determine whether any
  applicants that have been awarded funds through other Fund programs were
  compliant with the award requirements, (ii) verification that the applicants’ investor
  letters were consistent with the capitalization information provided in their
  applications, and (iii) consultation with the IRS with respect to any applicant that
  proposed a business strategy that may not be permitted under the NMTC Program
  regulations.

Step Three:

- After the second stage of the review process, the rank order list of applicants and the
  recommended allocation amounts were forwarded to the Selecting Official (the
  NMTC Program Manager). The Selecting Official reviewed the rank order list and
  the recommendations, and decided whether to accept or modify the panel’s
  recommendations. In the event the Selecting Official’s decision varied from the
  panel’s recommendation by more than a prescribed amount, then concurrence is
  required by the Reviewing Official (Deputy Director). This process ensures that
  adequate documentation and oversight is maintained to protect the integrity of the
  allocation decisions.

- Per the Fund’s allocation application evaluation policies and procedures, the
  Selecting Official’s (and, as the case may be, the Reviewing Official’s) allocation
  decisions are final.

- The CDFI Fund expects that applicants will be informed of the Fund’s decisions in
  March 2003. Shortly thereafter, allocatees will enter into allocation agreements with
  the Fund.

Following an internal evaluation of the NMTC application and selection process, the
CDFI Fund will determine modifications for the next round of application and applicant
guidance materials. It is expected that applications for the next round will be due in the
last quarter of calendar year 2003, and allocation decisions in the first quarter of 2004.

The CDFI Fund is developing, with the Internal Revenue Service, a compliance system
for the NMTC Program to ensure that each entity that receives a NMTC allocation will
continue to fulfill its CDE certification requirements and the terms of its allocation
agreements with the CDFI Fund, and that the IRS has appropriate information to
determine that allocatees are operating within the legislation and regulations promulgated
by the IRS. The compliance system will be based in part on input provided at a meeting
co-sponsored by the CDFI Fund and the General Accounting Office in March of 2002.
At that meeting, academics and other community development financing experts
discussed the advantages and disadvantages to various approaches to both compliance
issues as well as approaches to evaluating the impact of the investments made under the
NMTC Program on low-income communities.

**CDFI Program Overview.** Through the CDFI Program, the CDFI Fund promotes
access to capital and local economic growth in distressed communities by directly
investing in and supporting CDFIs. The CDFI Program provides financial assistance in
the form of grants, loans, equity investments or deposits to CDFIs. Since its inception,
the CDFI Fund has made over 900 CDFI Program awards, totaling $405 million.

For FY 2003, the CDFI Fund has refocused the CDFI Program to meet more effectively
the Fund’s objectives in three key ways: promoting a “continuum of growth” that
encourages the largest and most established CDFIs to leverage non-governmental sources
of capital; giving highest priority on investments that serve the most distressed
geographic areas; and giving priority to initiatives that promote homeownership among
low-income and other underserved populations.

**The Financial Assistance Component:** replaces the Core, Intermediary, and part of the
Small and Emerging CDFI Assistance Components offered in past years. The Financial
Assistance Component consolidates the CDFI Program’s components that provide
financial assistance (requiring matching funds) into one competitive funding round.

The following table depicts asset-size of CDFI Program awardees and illustrates the
continuum of growth strategies:

The CDFI Fund recognizes that there are two broad categories of CDFIs: larger CDFIs
that have greater ability to leverage private-sector resources, have greater self-sufficiency
and generate higher volume of activity and corresponding community development
impact, and smaller CDFIs that serve smaller, more underserved markets, are less
efficient and produce lower volumes of activity, but serve critical market needs.
The Technical Assistance/Native American Technical Assistance (TA/NATA) Component allows applicants to apply for limited technical assistance funds on a rolling first-in, first-reviewed basis. This program replaces the Small and Emerging CDFI Assistance (SECA) Component and part of the Native American CDFI Technical Assistance (NACTA) Program offered in FY 2002. The main purpose of the new TA/NATA Component is to allow new and growing CDFIs to access needed technical assistance when they need it, in order to help them enhance their capacity to serve their target markets.

Entities applying to this program are on the beginning end of the “growth continuum,” either as start-up or small entities. The purpose of the technical assistance provided (including staff training, technology, and outside expertise), is to push entities more quickly and effectively up the growth continuum than they would without the technical assistance. Some typical uses of TA grants include: computer system upgrades and software acquisition; developing loan underwriting policies and procedures; evaluating current loan products and developing new ones; and training staff.

Bank Enterprise Award (BEA) Program Overview. The BEA Program is aimed at expanding financial service organizations’ community development lending and investments through regulated institutions.

The BEA Program provides monetary incentives for banks and thrifts to expand investments in CDFIs and/or to increase lending, investment and service activities in distressed communities. BEA Program awards have varied in size from less than $1,000 to almost $3 million, depending upon the type and amount of assistance provided by the bank and the activities being funded through the bank’s investments. In general, banks that provide equity investments to CDFIs are likely to receive the largest awards relative to the size of their investments.

However, the Administration currently is evaluating the BEA Program to ensure that it is as effective and efficient as possible, to distinguish the program from the mandates of the Community Reinvestment Act, and to ensure that awardees use BEA Program awards for community development activities.

In addition, the CDFI Fund concluded that the BEA Program regulations should be revised to target awards to “personal wealth” and “community asset” building activities, and to those CDFIs with a greater need for the incentive provided by the BEA Program award to facilitate their bank partnerships. Thus, in 2002, the CDFI Fund initiated regulatory changes to the BEA Program to take effect with the FY 2003 funding round.

The Administration supports continuation of a reconstituted BEA Program. An effective BEA Program could provide the Treasury Department with an effective strategy to engage traditional banks and thrifts to help us achieve our goal of improving the economic conditions of underserved areas through insured depository institutions. The role that banks and thrifts play is critical to capital access. We need to encourage them to
target these underserved communities in ways that do not impede safe and sound banking practices in a sustainable manner.

**Training Program.** The Training Program is aimed at supporting the CDFI Fund’s strategic goal of strengthening the organizational capacity and expertise of CDFIs and other Financial Service Organizations. The Training Program, which was started in FY 1999, provides funds that support the development and delivery of training products to CDFIs and other entities engaged in community development finance. Training is addressed via classroom instruction, web-based distance learning, and other electronic formats. The CDFI Fund is particularly excited about providing the support to help build the electronic teaching capacity of the CDFI industry. Through distance learning, the cost of accessing training is reduced for the CDFIs (elimination of the time and cost of travel) and the ability of CDFIs that are either of limited resources or of remote locations to access training is enhanced.

By the end of calendar 2002, two of the training providers completed their efforts under the training contract with the CDFI Fund. The remaining two will continue to provide training through this fiscal year. Training provided in FY 2003 is largely through distance learning technology. Extension of training delivery requirements will be determined in part on availability of appropriated funds.

**Rural Community Assistance.** The FY 2002 appropriations for the CDFI Fund contained report language requesting an update on rural lending practices as part of the fiscal year 2003 budget submission. CDFI Program and BEA Program awardees are indeed reaching rural areas. In 2002, 60 percent of awardees receiving financial assistance, and 50 percent of technical assistance awardees, indicated that they served rural areas as all or part of their markets.

Of 156 surveyed awardee CDFIs, 20 (13 percent) estimated that 100 percent of their activities served rural areas and an additional 23 (15 percent) estimated that 51 to 99 percent of their activities served rural areas. Considering that 20 percent of U.S. households reside in non-metropolitan areas (Census 2000), the percentage of CDFI Fund awardees that target more than half their activities to rural areas (28 percent) compares favorably.

Under the BEA Program, a “distressed area” must have a population of at least 4,000. Distressed areas are composed of census tracts. Many rural census tracts do not have 4,000 people, which in many cases precludes their eligibility as BEA distressed areas. Eliminating the BEA Program population requirement would result in a greater portion of rural America becoming eligible for benefiting from the BEA Program; such a change would require legislative action.

**Native American Strategic Plan; the NACD Program; the Native American CDFI Training Program.** The CDFI Fund is preparing a Native American Strategic Plan. It will address the issues of CDFI reach and service to Native American, Alaska Native and Native Hawaiian communities; increasing capacity within these communities to respond
to credit, investment and financial services needs; and attracting other existing resources to these underserved communities.

Since 2002, the CDFI Fund has broadened its outreach to Native American communities. In FY 2002, the CDFI Fund made its first set of awards under the NACTA Program. A total of 38 organizations were selected to receive $2.7 million in technical assistance. Eleven awards were to CDFIs or entities planning to become CDFIs and 27 were to entities, such as tribes and tribal housing authorities, proposing to create separate CDFIs. Funded organizations are based in 18 states. The successful outcome of the launch of the NACTA Program has greatly increased the CDFI Fund’s reach in support of Native American and Alaska Native communities, and is building an emerging network of Native American focused CDFIs.

In 2003, the CDFI Fund is modifying the 2002 NACTA Program by separating it into two parts: (i) the NATA Component (of the CDFI Program’s Technical Assistance Component) and (ii) the NACD Program. This modification again reflects the CDFI Fund’s “continuum of growth” approach. Entities such as tribes or non-profit organizations serving Native American communities that want to create CDFIs are at the earliest stage of the growth continuum. These entities can apply for technical assistance funds to develop a plan to create a CDFI over a three-year period. In this way, organizations that serve Native American communities are within the mainstream of the CDFI Fund’s programs.

In 2003, the CDFI Fund is implementing the Native American CDFI Training Program. This training program is designed to help Native American communities build technical and leadership skills enabling them to create and manage CDFIs. Funds will be provided to selected contractors to provide training programs through both Internet based and classroom based formats.

The CDFI Fund is also actively looking to build partnerships with other Federal agencies in support of community development in Native American communities. The CDFI Fund is considering the possibility of coordinating efforts to provide incentives to use existing Federal programs (such as loan guarantee programs), and efforts to attract depository institutions and private sector investors to serve Native American communities. To this end, the CDFI Fund is developing a demonstration program to test approaches to provide financing for economic development, affordable housing, and for provision of financial services in Native American communities.

**Secondary Market Study.** The CDFI Fund is conducting a study to explore the possibility of expanding the secondary market for CDFI loans. Selling loans on the secondary market while common among traditional lenders is not a general practice among CDFIs. In fact, very few CDFIs have engaged in loan sales to date. If CDFI loans can be made attractive to potential investors and investors are willing to pay a reasonable price, the CDFI industry will gain a major source of private sector capital that is likely to grow with the industry’s needs and will limit the CDFIs need for additional capitalization.
The CDFI Fund’s study will examine the current and future capital needs of CDFIs, and will make recommendations. The study will involve consultations with CDFIs, potential loan purchasers and others with an interest in the secondary market. A draft report is expected in the summer of 2003.

* * * * *

As you can see, the CDFI Fund has made substantial progress over the last year. The CDFI Fund’s programs represent a continuum of capital, investment and incentive opportunities aimed at developing affordable housing, promoting homeownership, starting and expanding businesses, meeting unmet market needs, and stimulating economic growth in our nation’s low-income and distressed areas. In short, the goal of the CDFI Fund is to help bring mainstream capital to those people and communities that have been overlooked. The CDFI Fund has made significant strides in the integration of its performance measures in the budget process.

Again, I thank you for the opportunity to present my testimony in support of the President’s FY 2004 budget request and look forward to answering any questions you may have for me.
