

December 4, 2012

Dear Representative/Senator:

On behalf of the undersigned organizations, businesses, and millions of Americans who enjoy and depend on our wildlife and natural resources, we strongly urge you to support extension of critical tax incentives for renewable energy and energy efficiency that are slated for expiration this year. It is equally important that Congress support collaborative efforts to protect sensitive habitat, fish and wildlife populations, and communities during large-scale renewable energy development. Investment and growth in properly-sited, wildlife-friendly clean energy and conservation are the best ways to combat climate change, sustain communities, create American jobs, and promote economic growth across the country.

Climate change is fundamentally altering our environment and putting our outdoor heritage at risk. Sportsmen/women, wildlife advocates, and outdoor enthusiasts are supportive of the development of clean, renewable energy resources as long as it is done in the right places and in a manner that is protective of fish and wildlife habitat. Extending clean energy incentives like the Production Tax Credit (PTC) and Investment Tax Credit (ITC) for the wind industry, upfront avoidance of construction in sensitive, high-conflict areas, and investing in the mitigation of potential impacts from development to fish and wildlife habitat are all critical. These policies will help us limit the dangerous carbon pollution that is fueling climate change, lessen our dependence on dangerous sources of oil, and protect our nation's communities and conservation legacy.

Investing in energy efficiency and responsibly sited renewable energy creates jobs, saves consumers money, protects our health, and safeguards wildlife habitats and the outdoor economy those habitats support. We urge you to support these essential investments in America and work to see they are enacted as soon as possible.

Sincerely,
